Re: Product Notification: K50 Beacon

Banner has recently updated the design for the K50 Beacon Indicators. Aesthetically, the top cover now has a small, welded window that serves as an improved access point for potting the device within the manufacturing process. With this design change, the unit's IP69K environmental rating is unaffected and ultimately improves the product's overall robustness as the electronics are better protected without any degradation in light output.

There are no changes to the K50 Beacons' P/N, Model Number, or List Price and this transition is occurring within production this month.

Old   New

Updated product specifications may be found on www.bannerengineering.com and feel free to contact Banner for any application assistance you may need.

Thank You!
