SMD Aluminium Electrolytic Capacitors

multicomp PRO

RoHS Compliant

Features:

- Standard type of V-chip, 2,000 hours, 105°C
- Applicable to SMT process.

Frequency Coefficient of Permissible Ripple Current

Frequency (Hz)	50	120	300	1K	≧10K
Coefficient	0.7	1	1.17	1.36	1.50

The endurance of capacitors is reduced with internal heating produced by ripple current at the rate of halving the lifetime with every 5°C rise. When long life performance is required in actual use , the rms ripple current has to be reduced.

Scope

This specification applies to aluminium electrolytic capacitor, used in electronic equipment.

Electrical Characteristics

Item	Test Method	Specification
Rated Voltage		Voltage range, capacitance range, see specification of this series.
Capacitance Dissipation factor	Measuring frequency : 120 ±12Hz Measuring voltage : ≦0.5Vrms + 0.5 ~ 2VDC Measurement circuit : 	Voltage range, capacitance range, see specification of this series. Dissipation factor, leakage current, see specification of this series.
Leakage current	DC leakage current shall be measured after 1~2 minutes application of the DC rated working voltage through the 1000Ω resistor at 20°C  R : 1000 ±100Ω S1 : Switch A : DC current meter S2 : Switch for protect of current meter V : DC voltage meter CX : Testing capacitor	Dissipation factor leakage current, see specification of this series.
Temperature characteristics	<table><tr><th>Step</th><th>Temperature</th><th>Storage Time</th></tr><tr><td>1</td><td>20 ±2°C</td><td>30 minutes</td></tr><tr><td>2</td><td>-40 ±3°C</td><td>2 hours</td></tr><tr><td>3</td><td>20 ±2°C</td><td>15 minutes</td></tr><tr><td>4</td><td>105 ±2°C</td><td>2 hours</td></tr></table>Step 1. Measure the capacitance and impedance. (Z_{r0}) (|Z|, 20°C , 120Hz ±10%) Step 2. Measure the impedance at thermal balance after 2 hours. (|Z|, 20°C , 120Hz ±10%) Step 4. Measure the capacitance and leakage current at thermal balance after 2 hours.	Step 2. Impedance ratio (Z_r / Z_{r0}) less than specified value. Step 4. Capacitance change : within ± 20% of the initial measured value. Leakage current : Less than 10 times of initial specified value .

Item	Test Method	Specification
Surge test	Rated surge voltage shall be applied (switch on) for 30 ±5 seconds and then shall be applied (switch off) with discharge for 5 ±0.5 min at room temperature . This cycle shall be repeated for 1000 cycles. Duration of one cycle is 6 ± 0.5 minutes .	Capacitance change : within ± 20% of the initial specified value. Dissipation factor : 2.7 less than 200% of the initial specified value. Leakage current : within initial specified value.
Applicable Ripple Current	The maximum A.C. current having frequency of 100k Hz which can be applied to the capacitor at 105 ±2°C continuously. Peak voltage not to exceed rated D.C.voltage.	

Mechanical characteristics

Lead strength	(A) Tensile strength : wire lead terminal : d (mm) ≦0.45 | 0.5 ~ 0.8 | 0.8<d ≦1.25 Load (kg) 0.51 | 1 | 2 Snap-in terminal d (mm) | snap-in terminal Load (kg) | 2 The capacitor shall withstand the constant tensile force specified between the body and each lead for 10 seconds without damage either mechanical or electrical. (B) Bending strength : wire lead terminal : d (mm) ≦0.45 | 0.5 ~ 0.8 | 0.8<d ≦1.25 Load (kg) 0.25 | 0.51 | 1 Snap-in terminal Cross section area of terminal | Force (kg) 0.5<S≦1 | 1 S>1 | 2.5 With the capacitor in a vertical position apply the load specified axially to each lead. The capacitor shall be rotated slowly from the vertical to the horizontal position, back to the vertical position. The 90° in the opposite direction and back the original position. Performance of capacitor shall not have changed and leads shall be undamaged	When the capacitance is measured, there shall be no intermittent contacts, or open- or short-circuiting. There shall be no such mechanical damage as terminal damage etc.
Vibration resistance	The frequency of the vibration shall vary uniformly within the range 10 to 55 Hz with the amplitude of 1.5mm, completing the cycle in the internal of one minute. The capacitor shall be securely mounted by its leads with hold the body of capacitor. The capacitor shall be vibrated in three mutually perpendicular directions for a period of 2 hours in each direction .	Capacitance : no unsteady. Appearance : no abnormal. Capacitance change : within ± 5% of initial measured value .
Solderability	The leads are dipped in the solder bath of Sn at 260 ±5°C for 2 ± 0.5 seconds . The dipping depth should be set at 1.5 ~ 2mm .	The solder alloy shall cover the 95% or more of the dipped lead's area .

Reliability

Item	Test Method	Specification
Soldering heat resistance	The leads immerse in the solder bath of Sn at 260 ±5°C for 10 ± 1 seconds until a distance of 1.5 ~ 2mm from the case.	No damage or leakage of electrolyte. Capacitance change : within ± 10% of the initial measured value. Tan δ : less than specified value. Leakage current : less than specified value.
Damp heat (Steady state)	Subject the capacitors to 40 ±2°C and 90% to 95% relative humidity for 240 ±8 hours.	Capacitance change : within ±10% of the initial measured value. Tan δ : less than specified value. Leakage current : less than specified value.
Load life	After X hours continuous application of DC rated working voltage at 105 ±2°C, the measurements shall meet the following limits. Measurements shall be performed after 2 hours exposed at room temperature .	Standard of judgement is according to requirement of this series.
Shelf life	After storage for Y hours at 105 ±2°C without voltage application , the measurements shall meet the following limits. Measurements shall be performed after exposed for 1 to 2 hrs at room temperature after application of DC rated voltage to the capacitor for Z minutes .	
Storage at Low Temperature	The capacitor shall be stored at temperature of -40 ±3°C for 240 ±8 hours, during which time no voltage shall be applied. And then the capacitor shall be subjected to standard atmospheric conditions for 16 hours or more, after which measurements shall be made.	Capacitance change : within ±10% of the initial value. Tan δ : less than specified value. Leakage current : less than specified value Appearance : no abnormal.
