

## Long Series SM200 Worm Type

BS328 DIN1897 ISO235/1 TIN

- HSSE, 8% Cobalt, S200 long series drills, TiN coated
- Premier-quality, high-performance drill, the long series SM200 has the advantage of reach and deep hole applications giving an improved performance over the traditional drill by more than doubling the penetration rates
- The parabolic flute construction provides good swarf control and heavy parallel web gives maximum rigidity but still maintains advantageous swarf space
- The SM200 long series is easily the best performer at depth with the added benefits: hi-tech performance, complete versatility on materials, deep hole drilling, positional accuracy from split point, Carbides cannot perform in long series
