Oil Grip Safety gloves

To make workers' lives easier and safer when handling oily or wet objects:

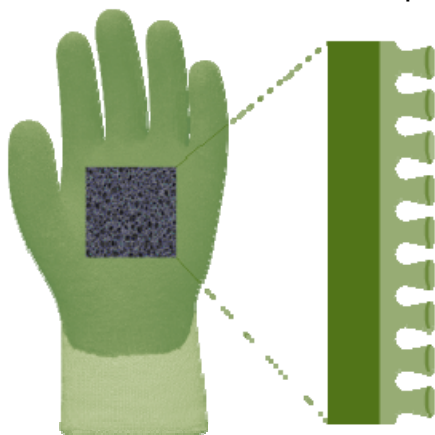

Improved grip is one of the most wanted features for modern synthetic gloves, demanded by today's workforce.

To address this issue, a new coating technology with a unique glove surfacing process has been designed to create a maximum bond, with minimum effort, under a wide variety of wet and oily conditions.

The innovative MicroFinish® coating technology.

Its superior grip performance and high protection is created by using a soft and flexible Nitrile compound filled with thousands of microscopic pockets. As these pockets come into contact with a surface, they create a vacuum that disperses fluids and allows the entire grip surface to make clean contact with the object. At the same time liquids are not penetrating to the hands as the coating is liquid proof. As a result hands are dry and much less grip force is needed while working in oily applications.

Furthermore chances to drop objects and therefore accidents are reduced heavily.

surface of the Nitrile coating

Comfort a high level of comfort and dexterity is guaranteed due to the seamless and soft liner made of 15 gauge nylon.

Fit 5 sizes, 7-11 guarantee a perfect fit for all hands

Sensitivity Handling small objects is no problem due to the thin liner, the soft coating and the tight fit

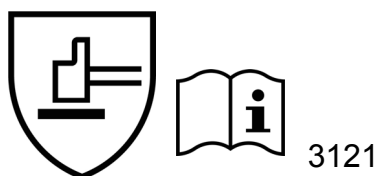

Work efficiency Due to less grip force needed, workers can perform their jobs more efficient

Applications: all kind of assembly work in light oily environments and handling wet and slippery objects, e.g automotive /OEM assembly and maintenance work, light oily metal handling Scaffolding, oil industry....

Article: NF35

Sizes : 7S-11XXL

CE Norms : EN420.2003, EN388.2003, Intermediate design

Packing: 12 pairs per polybags, 144 pairs per outer case

Dimensions: 24x35x55 cm (h/w/d)

Weight : approx. 10 kg
