

28V Operation High Speed Voltage Regulators with Stand-by Function

GENERAL DESCRIPTION

The XC6701 series are positive voltage regulator ICs manufactured using CMOS process with 28V of operation voltage. The series consists of a voltage reference, an error amplifier, a current limiter, a thermal shutdown circuit and a phase compensation circuit plus a driver transistor.

The output voltage is selectable in 0.1V increments within the range of 1.8V to 18V which fixed by laser trimming technologies. The output stabilization capacitor (CL) is also compatible with low ESR ceramic capacitors.

The over current protection circuit and the thermal shutdown circuit are built-in. These two protection circuits will operate when the output current reaches current limit level or the junction temperature reaches temperature limit level.

The CE function enables the output to be turned off and the IC becomes a stand-by mode resulting in greatly reduced power consumption. Packages are selectable depending on the applications from SOT-25, SOT-89, SOT-89-5, USP-6C, SOT-223, and TO-252.

APPLICATIONS

- Car audio, Car navigation systems
- Note book computers, PDAs
- Home appliances
- Audio visuals, Digital cameras, Video cameras
- Cordless phones, Wireless communication

FEATURES

- Max Output Current** : More than 150mA (200mA limit)
($V_{IN}=V_{OUT}+3.0V$)
- Dropout Voltage** : 300mV@ $I_{OUT}=20mA$
- Input Voltage Range** : 2.0V~28.0V
- Output Voltage Range** : 1.8V~18.0V (0.1V increments)
- High Accuracy** : $\pm 2\%$
- Low Power Consumption** : 50 μA ($V_{OUT}=5.0V$)
- Stand-by Current** : Less than 0.1 μA
- High Ripple Rejection** : 50dB@1kHz
- Operating Temperature** : -40 ~+85
- Low ESR Capacitor** : Ceramic Capacitor Compatible
(Internal Phase Compensation)
- Small Packages** : SOT-25, SOT-89, SOT-89-5,
USP-6C, SOT-223, TO-252

TYPICAL APPLICATION CIRCUITS

TYPICAL PERFORMANCE CHARACTERISTICS

PIN CONFIGURATION

* The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the Vss (No. 5) pin.

PIN ASSIGNMENT

XC6701B Series

PIN NUMBER			PIN NAME	FUNCTIONS
SOT-25	SOT-89-5	USP-6C		
1	5	6	VIN	Power Input
2	2	5	Vss	Ground
3	4	2, 4	NC	No connection
4	3	3	CE	ON/OFF Control
5	1	1	VOUT	Output

XC6701D Series

PIN NUMBER			PIN NAME	FUNCTIONS
SOT-89	SOT-223	TO-252		
3	3	1	VIN	Power Input
2	2	2	Vss	Ground
1	1	3	VOUT	Output

PRODUCT CLASSIFICATION

Ordering Information

XC6701 _____

DESIGNATOR	DESCRIPTION	SYMBOL	DESCRIPTION
	Type and Options of Regulators	B	Fixed output voltage with CE function (High Active)
		D	Fixed output voltage with no CE function
	Output Voltage	18 ~ 99	For the voltage within 1.8V ~9.9V; e.g. 2.5V 25 5.0V 50
		A ~ H, J	For the voltage above 10.0V; e.g. 11.6V B6 15.2V F2 18.0V J0
	Output Voltage Accuracy	2	Output voltage 100mV increments, within $\pm 2\%$ accuracy e.g. 2.5V =2, =5, =2
	Packages Taping Type ^(*)	MR	SOT-25 (for B type only)
		PR	SOT-89 (for D type only)
		PR	SOT-89-5 (for B type only)
		ER	USP-6C (for B type only)
		FR	SOT-223 (for D type only)
		JR	TO-252 (for D type only)

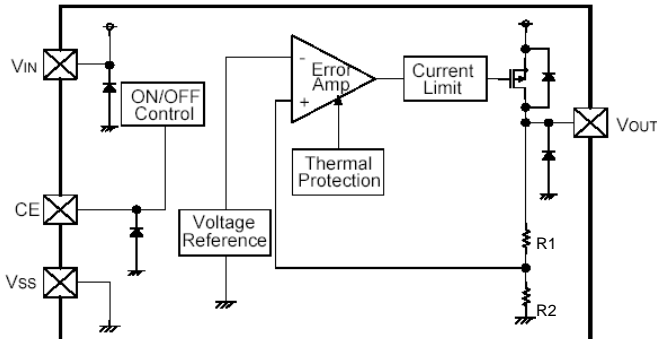

^(*) The device orientation is fixed in its embossed tape pocket.

For reverse orientation, please contact your local Torex sales office or representative.

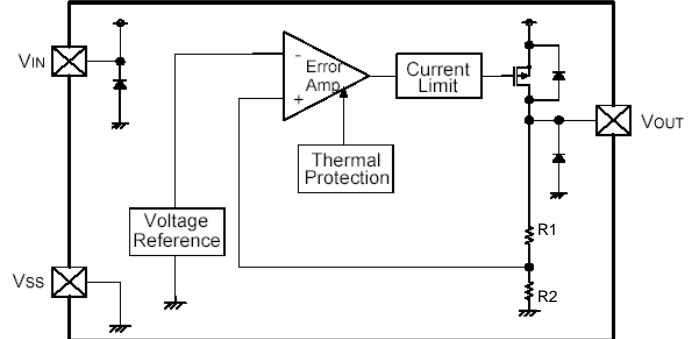

(Standard orientation: R, Reverse orientation: L)

OPERATIONAL EXPLANATION

<Output Voltage Control>

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled and stabilized by a system of negative feedback. The current limit circuit and short protect circuit operate in relation to the level of output current and heat dissipation. Further, the IC's internal circuitry can be shutdown via the CE pin's signal.

<Short-Circuit Protection>

The XC6701 series includes a current fold-back circuit as a short circuit protection. When the load current reaches the current limit level, the current fold-back circuit operates and output voltage drops. The output voltage drops further and output current decreases. When the output pin is shorted, a current of about 30mA flows.

<CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6701B series. In shutdown mode, output at the VOUT pin will be pulled down by R1 and R2 to the VSS level. Note that as the XC6701B series' operations will become unstable with the CE pin open. We suggest that you use this IC with either a VIN voltage or a VSS voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry if a medium voltage is applied.

<Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit level (150 TYP.), the thermal shutdown circuit operates and the driver transistor will be set to OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of the thermal shutdown release voltage.

<Minimum Operating Voltage>

For the stable operation of the IC, over 2.0V of input voltage is necessary. The output voltage may not be generated normally if the input voltage is less than 2.0V.

NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to the noise and/or phase lag depending on output current. Please strengthen VIN and VSS wiring in particular.
3. Phase compensation inside the IC is performed in the XC6701 series. Therefore, an abnormal oscillation does not occur even if there is no output capacitor CL. An input capacitor CIN around 0.1 μF~1.0 μF between the VIN pin and the VSS pin is required for input stability. Also, the output voltage fluctuation such as under shoot or over shoot, which occurs because of the load change can be controlled by placing the output capacitor CL around 0.1 μF~1.0 μF between the VOUT pin and VSS pin. The input capacitor (CIN) and the output capacitor (CL) should be placed to the IC as close as possible with a shorter wiring.
4. When the IC is operated with no load, the output voltage may increase in the high temperature beyond operating range.

SOT-25 Power Dissipation

Power dissipation data for the SOT-25 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

1. Measurement Condition (Reference data)

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
Copper (Cu) traces occupy 50% of the board area
In top and back faces
Package heat-sink is tied to the copper traces
(Board of SOT-26 is used.)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Operating temperature

Board Mount ($T_j \text{ max} = 125$)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	600	166.67
85	240	

PACKAGING INFORMATION (Continued)

SOT-89-5 Power Dissipation

Power dissipation data for the SOT-89-5 is shown in this page.
 The value of power dissipation varies with the mount board conditions.
 Please use this data as one of reference data taken in the described condition.

1. Measurement Condition (Reference data)

- Condition: Mount on a board
- Ambient: Natural convection
