The CN8200 temperature/process controller is extremely versatile and user-friendly. During setup, the user needs to review only those parameters relevant to the particular application. A dual digital display offers optimal process information at a glance. Individual LEDs identify the status of outputs, alarms, digital communications, and special options. The CN8200 features a NEMA 4X front panel and a universal power supply that accepts 100 to 250 Vac and 120 to 250 Vdc. A 24 Vac/24 Vdc power supply option is also available. Available control algorithms are P, PI, PD, PID, or on/off. The autotune feature automatically sets proportional band, derivative, and integral before the process reaches setpoint. These parameters provide quick stabilization of processes with minimum overshoot, hunting, or cycling. Eight-level ramp/soak control is standard and includes a decimal display on thermocouple ranges, digital display and signal filtering, and a percentage of power limit setting.

The dual control outputs can be configured for a variety of control and alarm applications, and 2 dedicated alarm outputs are also available.

The CN8200 offers a wide range of options, including RS232 and RS485 digital communications, 3 contact/digital input modes, 4 transducer excitation voltages, and 4 auxiliary output ranges.
