Evaluation kit	VOC Index	NOx Index
SEK-SVM40	✓	✗
SEK-SVM41	✓	✓

Along with the product extension of the SGP4x line with its metal-oxide based multipixel gas sensor SGP41, Sensirion launches a new evaluation kit for the SGP4x family on 1.12.2021, the SEK-SVM41. It comprises all features of the SEK-SVM40 (VOC Index) and additionally features a fully processed NOx Index signal. Therefore, the SEK-SVM41 will replace the SEK-SVM40. Customers with focus on VOC measurements may use either of the two evaluation kits. Customers with interest in both VOC and NOx Index signals must purchase the new SEK-SVM41.

Orders of SEK-SVM40 can still be placed until 29.10.2021 and will be processed as long as stock lasts but not later than 30.11.2021.

SEK-SVM41 can be ordered as of 1.10.2021 with first delivery beginning from 1.12.2021.
