RJ11 to UK style Male Cable (2m) - 4 core

ADSL & Modem Cables

ADSL Splitter/Microfilters

Available as either a small T adaptor or faceplate, the ADSL microfilter is essential where there has been a "plug and go" or "wires only" ADSL installation. Individual units are required, in such self install environments, for each telephone socket on the premises.

Features:

- Suitable dual faceplate or T adaptor required for EACH active telephone socket in "wires only" sites
- Small, compact microfilter marked up with phone & ADSL (RJ11) sockets
- Separates incoming ADSL (high frequency) & phone (low frequency) signals
- Micro filter devices include ring capacitor which promotes clear signal and maintains system integrity

4013F	ADSL Microfilter Faceplate

Premium Quality ADSL Cables

PREMIUM QUALITY

Designed for connecting the incoming ADSL line to the modem, these high quality cables are made using 50 micron gold plated RJ11 connectors. We stock both the standard as well as the male to female extension cables which can be used to extend existing on site cables.

Features:

- Ideal for connecting a microfilter on an incoming ADSL line to ADSL modem
- Both male to male & male to female versions in a variety of lengths
- High quality cables manufactured using 50 micron connectors

1970	T Adaptor - RJ11 2 to 1

UK Telephone to RJ11 Cables

The series of cables and adaptors feature the female of both the BT style plug and the RJ11 connector. Although not as commonly required as the standard BT plug to RJ11 plug these products are often used where hard wired cables are found and modem conversion is required.

Custom made length cables can be quoted for upon request.
