

Multi Output Splitters

Multi output splitters divide one output into three, four or six outputs, providing the option of attaching up to 6 individual lengths of wire from one output on the inverter.

With a quick and easy release mechanism, these connectors are built to commercial specification.

Power Extension – 1.5m

Extension lengths provide you with the ability to extend the length of extension cable between power pack and glow wire.

With connections on either end, these lengths are easy to plug and play.
