

DVI Monitor Cables

DVI-D Single Link Monitor Cables

Part No: See Chart

Featuring the unique Digital Visual Interface (DVI) connector, the cables are referred to as DVI/D; for use between mother board, graphics cards and monitors fitted with the same interface termination. These DVI Digital cables are Single link (up to 165 Mhz bandwidth) versions. As most XGA monitors tend to run at 50 Mhz, then Single link cables will, at the moment, tend to be the most likely required.

Features & Benefits

- Connects host device to a display unit supporting high resolution video signals
- Now commonly fitted to digital monitors - either instead of or alongside the analogue VGA interface
- Available in Single link (18 pin) versions
- Single link cables support bandwidths up to 165 Mhz
- Manufactured using UL 20276 cable and high quality moulded connectors
- Available in various lengths up to 15m
