

MIMXRT1060-EVK: i.MX RT1060 Evaluation Kit

Overview

The i.MX RT1060 EVK is a 4-layer through-hole USB-powered PCB. At its heart lies the i.MX RT1060 crossover MCU, featuring NXP's advanced implementation of the Arm® Cortex®-M7 core. This core operates at speeds up to 600 MHz to provide high CPU performance and excellent real-time response.

Support for FreeRTOS™ available within the MCUXpresso SDK.

The i.MX RT1060 Evaluation Kit is supported by Zephyr™ OS for developing the Internet of Things with a free, open-source embedded operating system. Click here [↗](#) to learn more.

i.MX RT Series of Crossover MCUs ([/docs/en/brochure/IMXRTPORTBR.pdf](#))

NXP's crossover processors and MCUs marry the simplicity of MCUs with the complexity of applications processors into a hybrid device designed to address the growing consumer demand for enhanced user experiences in smart and secure high-performance products. Included in this class of products is the i.MX RT series of crossover MCUs that combines unprecedented performance with reliability and high levels of integration and security to propel industrial, IoT and automotive applications.
