DataVac® 3 ESD Safe Maintenance System

Model DV-3ESD1

Not pictured: Model DV-2ESD1
See specifications below

An IT professional's dream, these industrial strength, anti-static vacuum/blower and dusting systems are developed specifically to keep expensive computers, printers, scanners, copiers, fax machines and other electronic equipment thoroughly clean and operating at peak efficiency.

Featuring 4-Stage HEPA filtration, both systems are 99.97% effective at trapping dust particles as small as 0.3 microns, preventing recontamination of the office environment.

The integrated toner filter system quickly and thoroughly cleans up messy toner spills from printers and copiers. A complete range of static-dissipating attachments can handle every conceivable office and IT equipment cleaning application.

Heavy-duty foam-filled carrying case with shoulder strap is included for conveniently storing and transporting the vacuum and accessories.
