**Index Mechanism.**

The Type MU mechanism provides indexing angles of 30°, 36°, 45° and 60°, (see Bulletin RW36 for full technical details).

The low friction moulded cam followers in the assembly ensures a smooth indexing action.

Balance pressure springs provide consistent and readily reproducible total switch torque values within the following ranges.

Light	7 to 18 x 10 <sup>-2</sup> Nm (10 to 26 oz, ins,)	Medium	14 to 32 x 10 <sup>-2</sup> Nm (20 to 46 oz, ins,)
High	28 to 56 x 10 <sup>-2</sup> Nm (40 to 80 oz, ins,)		

Type A indexing mechanism may also be used as an alternative where a simpler, space saving mechanism is required. The switch then becomes model A-MA. 30° indexing only.

**Contacts & Termination's.**

Standard. Silver plated brass.  
 Alternatives. - Hard gold plated or silver contacts are available at extra cost as are contacts with gold flash.  
 Termination's. - Forward, standard: Straight, alternative.

**Rotor Blades.**

Standard. - Shorting. (make before break. MBB.)  
 Alternative. - Non-shorting. (break before make. BBM.)

**Insulation.**

Stator. - Moulded glass fibre loaded diallylphthalate (DAP)  
 Rotor. - Polycarbonate.

**Finish.**

Index Springs, Stainless steel: other metal parts, passivated zinc plated. Finishes to order.

- Variations.
- Biased indexing is available giving momentary contact on positions 8 to 7, 5 to 4, 4 to 3, 3 to 2 and 2 to 1 as well as 3 position biased to centre.
  - Concentric shafts - dual concentric shafts and mechanisms for dual switching applications. (Not available for 36° indexing).
  - Insulated shafts.
  - Electrostatic shields.
  - Printed circuit termination's - 2 types are available giving a variation in mounting height of the wafer above the P.C.board.
  - Adjustable stops - 2 types are available.
    - Front - can be set without dismantling the switch and are available on models MU-MA (a),(d) and A-MA with imperial bush.
    - Rear - for use with all other indexing variations both Imperial and Metric versions.

### General Information

These slim indexing mechanisms provide a reduced dimension behind the panel compared with the standard mechanisms.

- Features,
- Lower noise from the indexing with energy absorbing moulded components.
  - Exceptional electrical insulation.
  - Low capacitance.
  - Quiet operation with low friction factor.
  - Hygienic and corrosion resistance.
  - High strength moulded bush.
  - No additional lubrication from enclosed indexing mechanism.

### New feature,

A recent improvement to the action on the 30° mechanism has improved the **positive action** or feel of the switch providing a more precise indexing which is almost impossible to tease indexed positions. To order this option please specify positive action version.
