STR-NCV48220-LDO-CP-GEVB: Strata Enabled NCV48220 LDO Charge Pump Evaluation Board

The STR-NCV48220-LDO-CP-GEVB provides an evaluation board for the NCV48220 LDO charge pump using Strata Developer Studio. The NCV48220 is a very low quiescent current 150 mA LDO regulator with an integrated battery voltage charge pump boost converter for automotive applications, enable signal functionality, current limit, thermal shutdown, and reverse bias current protection. This evaluation board is used with Strata to control the NCV48220 and monitor telemetry such as input/output voltage, input/output current, power loss, and temperature.

See the Strata webpage at www.onsemi.com/strata for more details!

Features and applications

Features

- Output Voltage: 5 V
- LDO Output Current: up to 150 mA
- Very Wide Input Voltage Operation Range: from 3 V to 40 V
- Very Low Quiescent Current: typ 35 μ A
- Enable Function (1.0 μ A max quiescent current when disabled)
- Microprocessor Compatible Control Functions: Reset Output
- AEC-Q100 Grade 1 Qualified and PPAP Capable
- Protection Features: Current Limitation, Thermal Shutdown, and Reverse Bias Output Current

application

- Stop-Start Applications
- Instruments and Clusters
- Infotainment
