

EVQ4323-D-00A

36V, 3A, Low Quiescent Current, Synchronous Step-Down Converter Evaluation Board, AEC-Q100 Qualified

DESCRIPTION

The EVQ4323-D-00A is an evaluation board for the MPQ4323, a configurable-frequency (350kHz to 2.5MHz), synchronous, step-down switching regulator with integrated internal high-side MOSFETs (HS-FETs) and low-side MOSFETs (LS-FETs).

The MPQ4323 provides 3A of highly efficient output current (I_{OUT}) with peak current mode control. The wide 3.3V to 36V input voltage (V_{IN}) range and 42V load dump tolerance accommodates a variety of step-down applications in automotive input environments. A 1 μ A shutdown mode quiescent current (I_Q) allows the device to be used in battery-powered applications.

High power conversion efficiency across a wide load range is achieved by scaling down the

switching frequency (f_{SW}) under light-load conditions to reduce the switching and gate driving losses.

An open-drain power good (PG) signal indicates that the output is within 94.5% to 105.5% of its nominal voltage.

Frequency foldback helps prevent inductor current runaway during start-up. Thermal shutdown provides reliable, fault-tolerant operation.

A high duty cycle and low-dropout mode are provided for automotive cold-crank conditions.

The EVQ4323-D-00A is fully assembled and tested. The MPQ4323 is available in a QFN-12 (2mmx3mm) package with wettable flanks.

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$, unless otherwise noted.

Parameters	Conditions	Value
Input voltage (V_{IN}) range		3.3V to 36V
Output voltage (V_{OUT})	$V_{IN} = 6\text{V to }36\text{V}$, $I_{OUT} = 0\text{A to }3\text{A}$	$V_{OUT} = 5\text{V}$
Maximum output current (I_{OUT})	$V_{IN} = 3.3\text{V to }36\text{V}$	3A
Typical efficiency	$V_{IN} = 12\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT} = 3\text{A}$	90.8%
Peak efficiency	$V_{IN} = 8\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT} = 1\text{A}$	94.4%
Switching frequency (f_{SW})		2.2MHz

EVALUATION BOARD

QUICK START GUIDE

The EVQ4323-D-00A evaluation board is easy to set up and use to evaluate the performance of the MPQ4323. For proper measurement equipment set-up, refer to Figure 2 on page 4 and follow the steps below:

1. Preset the power supply (V_{IN}) between 6V and 36V, then turn off the power supply.
2. Set load current between 0A and 3A. Electronic loads represent a negative impedance to the regulator, and setting a current too high triggers hiccup mode.
3. If longer cables are used between the source and the EVB (>0.5m total), place a damping capacitor at the input terminals, especially when $V_{IN} \geq 24V$.
4. Connect the power supply terminals to:
 - a. Positive (+): VEMI
 - b. Negative (-): GND
5. Connect the load terminals to:
 - a. Positive (+): VOUT
 - b. Negative (-): GND
6. After making the connections, turn on the power supply.
7. To use the enable function, apply a digital input to the EN pin. Drive EN above 1.02V to turn the regulator on; drive EN below 0.85V to turn it off. If the enable function is not used, EN can be connected directly to V_{IN} .
8. Connect a resistor between the FREQ and GND pins to set the internal oscillator frequency.
9. The external resistor divider sets the output voltage (V_{OUT}) (see Figure 1).

Figure 1: Feedback Divider Network with Adjustable Output

R_5 is selected to be 100k Ω . R_6 can then be calculated using Equation (1):

$$R_6 = \frac{R_5}{\frac{V_{OUT}}{0.8V} - 1} \quad (1)$$

Refer to the Application Information section in the MPQ4323 datasheet to calculate the inductance and output capacitance for different V_{OUT} values.

EVB TEST RESULTS

Performance curves and waveforms are tested on the evaluation board, $V_{IN} = 12V$, $V_{OUT} = 5V$, $T_A = 25^\circ C$, unless otherwise noted.

Input Current vs. Load Current

$R_{FB1} = 100k\Omega$, $R_{FB2} = 19.1k\Omega$,
DCR = 22.1m Ω

Efficiency vs. Load Current

$R_{FB1} = 100k\Omega$, $R_{FB2} = 19.1k\Omega$,
DCR = 22.1m Ω

Efficiency vs. Load Current

DCR = 22.1m Ω

Efficiency vs. Load Current

DCR = 22.1m Ω

Load Regulation

DCR = 22.1m Ω

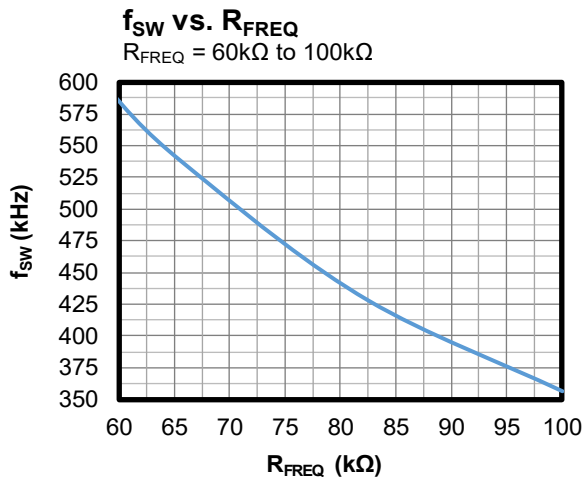

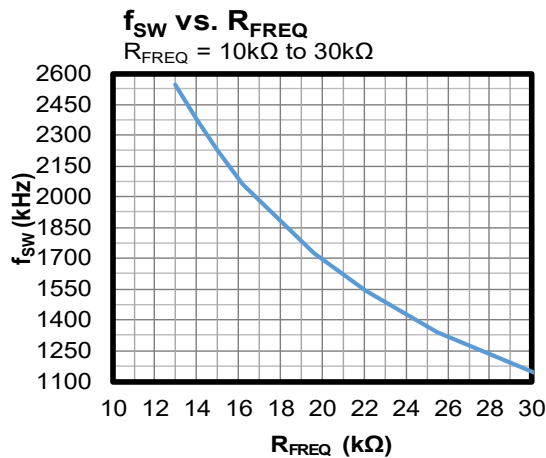

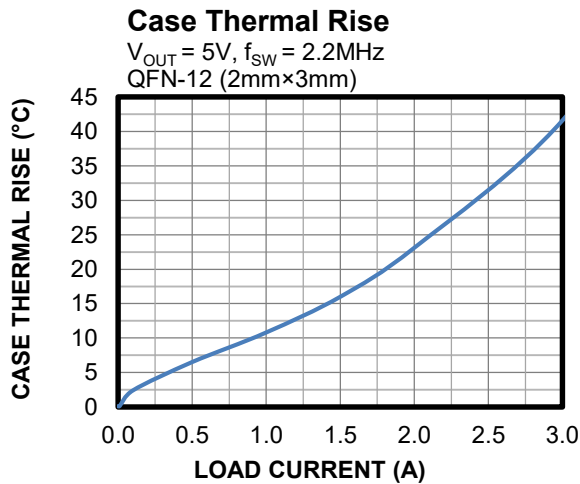

Line Regulation

DCR = 22.1m Ω

EVb TEST RESULTS (continued)

Performance curves and waveforms are tested on the evaluation board, $V_{IN} = 12V$, $V_{OUT} = 5V$, $T_A = 25^\circ C$, unless otherwise noted.

EVB TEST RESULTS (continued)

Performance curves and waveforms are tested on the evaluation board, $V_{IN} = 12V$, $V_{OUT} = 5V$, $T_A = 25^\circ C$, unless otherwise noted.

Thermal Performance

$I_{OUT} = 1.5A$, no forced airflow, $T_{CASE} = 37.1^\circ C$

Thermal Performance

$I_{OUT} = 3A$, no forced airflow, $T_{CASE} = 54.5^\circ C$

EVB TEST RESULTS (continued)

Performance curves and waveforms are tested on the evaluation board, $V_{IN} = 12V$, $V_{OUT} = 5V$, $T_A = 25^\circ C$, unless otherwise noted.
