

For the electronic measurement of current: DC, AC, pulsed..., with galvanic separation between the primary and the secondary circuit.

### Features

- Open loop multi-range current transducer
- Voltage output
- Galvanic separation between primary and secondary circuit
- Low power consumption
- Compact design for THT PCB mounting
- Factory calibrated.

### Special feature

- Single power supply +3.3 V.

### Advantages

- Low offset temperature drift
- Creepage / clearance > 11 mm
- Very short delay time < 200 ns
- High cut-off frequency > 1 MHz
- Enhanced immunity.

### Applications

- AC variable speed and servo motor drives
- Static converters for DC motor drives
- Battery supplied applications
- Uninterruptible Power Supplies (UPS)
- Switched Mode Power Supplies (SMPS)
- Combiner box
- Solar inverter on DC side of the inverter (MPPT)
- Plasma cutter, welding
- Charging station.

### Standards

- IEC 61010-1: 2017
- IEC 61010-2-30: 2017
- IEC 61800-3: 2017
- IEC 61800-5-1: 2007
- IEC 62109-1: 2010
- UL 508: 2018.

### Application Domain

- Industrial.

**Caution**

If the device is used in a way that is not specified by the manufacturer, the protection provided by the device may be compromised. Always inspect the electronics unit and connecting cable before using this product and do not use it if damaged. Mounting assembly shall guarantee the maximum primary conductor temperature, fulfill clearance and creepage distance, minimize electric and magnetic coupling, and unless otherwise specified can be mounted in any orientation. This device is not intended for outdoor use.

**Caution, risk of electrical shock**

This transducer must be used in limited-energy secondary circuits SELV according to IEC 61010-1, in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating specifications.

Use caution during installation and use of this product; certain parts of the module can carry hazardous voltages and high currents (e.g. power supply, primary conductor). Ignoring this warning can lead to injury and or/cause serious damage. De-energize all circuits and hazardous live parts before installing the product. All installations, maintenance, servicing operations and use must be carried out by trained and qualified personnel practicing applicable safety precautions.

This transducer is a build-in device, whose hazardous live parts must be inaccessible after installation. This transducer must be mounted in a suitable end-enclosure. Besides make sure to have a distance of minimum 30 mm between the primary terminals of the transducer and other neighboring components.

Main supply must be able to be disconnected. Never connect or disconnect the external power supply while the primary circuit is connected to live parts. Never connect the output to any equipment with a common mode voltage to earth greater than 30 V. Always wear protective clothing and gloves if hazardous live parts are present in the installation where the measurement is carried out. This transducer is a built-in device, not intended to be cleaned with any product. Nevertheless if the user must implement cleaning or washing process, validation of the cleaning program has to be done by himself. When defining soldering process, please use no cleaning process only.

**ESD susceptibility**

The product is susceptible to be damaged from an ESD event and the personnel should be grounded when handling it.

Do not dispose of this product as unsorted municipal waste. Contact a qualified recycler for disposal. Although LEM applies utmost care to facilitate compliance of end products with applicable regulations during LEM product design, use of this part may need additional measures on the application side for compliance with regulations regarding EMC and protection against electric shock. Therefore LEM cannot be held liable for any potential hazards, damages, injuries or loss of life resulting from the use of this product.

Compliance with EU directives.

Direct current power supply.

Underwriters Laboratory Inc. recognized component

### Absolute maximum ratings

Parameter	Symbol	Unit	Value
Supply voltage (not destructive)	$U_C$	V	5.5
Primary conductor temperature	$T_B$	°C	120
Electrostatic discharge voltage (HBM - Human Body Model)	$U_{ESD}$	kV	2

Stresses above these ratings may cause permanent damage. Exposure to absolute maximum ratings for extended periods may degrade reliability.

### UL 508: Ratings and assumptions of certification

File # E189713 Volume: 2 Section: 19

#### Standards

- CSA C22.2 NO. 14-18 INDUSTRIAL CONTROL EQUIPMENT - Edition 13
- UL 508 STANDARD FOR INDUSTRIAL CONTROL EQUIPMENT - Edition 18

#### Ratings

Parameter	Symbol	Unit	Value
Primary involved potential		V AC/DC	600
Max surrounding air temperature	$T_A$	°C	100   105
Primary current	$I_P$	A	130   100
Secondary supply voltage	$U_C$	V DC	5
Output voltage	$U_{out}$	V	0 to 5
Current consumption (max)	$I_C$	mA	26

### Conditions of acceptability

When installed in the end-use equipment, consideration shall be given to the following:

- 1 - The secondary circuit pin terminals have not been evaluated for field wiring.
- 2 - Low voltage control circuit shall be supplied by an isolating 5 V DC source.
- 3 - This product is intended to be mounted on a printed wiring board.

### Marking

Only those products bearing the UR Mark should be considered to be Listed or Recognized and covered under UL's Follow-Up Service. Always look for the Mark on the product.

**Insulation coordination**

Parameter	Symbol	Unit	Value	Comment
RMS voltage for AC insulation test 50/60 Hz/1 min	$U_d$	kV	4.4	
Impulse withstand voltage 1.2/50 $\mu$ s	$U_{Ni}$	kV	9.6	
Partial discharge test voltage ( $q_m < 10$ pC)	$U_t$	V	1500	Primary / Secondary
Clearance (pri. - sec.)	$d_{Cl}$	mm	> 11	Shortest distance through air
Creepage distance (pri. - sec.)	$d_{Cp}$	mm	> 11	Shortest path along device body
Clearance (pri. - sec.)		mm	> 11	When mounted on PCB with recommended layout
Case material				V0 according to UL 94
Comparative tracking index	$CTI$		600	
Application example		V	600	Reinforced insulation, non uniform field according to IEC 61800-5-1, CAT III PD2
Application example		V	1000	Basic insulation non uniform field according to IEC 61800-5-1, CAT III PD2
Application example		V	600	Simple insulation, non uniform field according to UL 508, CAT III PD2

**Environmental and mechanical characteristics**

Parameter	Symbol	Unit	Min	Typ	Max	Comment
Ambient operating temperature	$T_A$	$^{\circ}$ C	-40		105	
Ambient storage temperature	$T_{A\text{st}}$	$^{\circ}$ C	-40		105

### Definition of typical, minimum and maximum values

Minimum and maximum values for specified limiting and safety conditions have to be understood as such as well as values shown in “typical” graphs.

On the other hand, measured values are part of a statistical distribution that can be specified by an interval with upper and lower limits and a probability for measured values to lie within this interval.

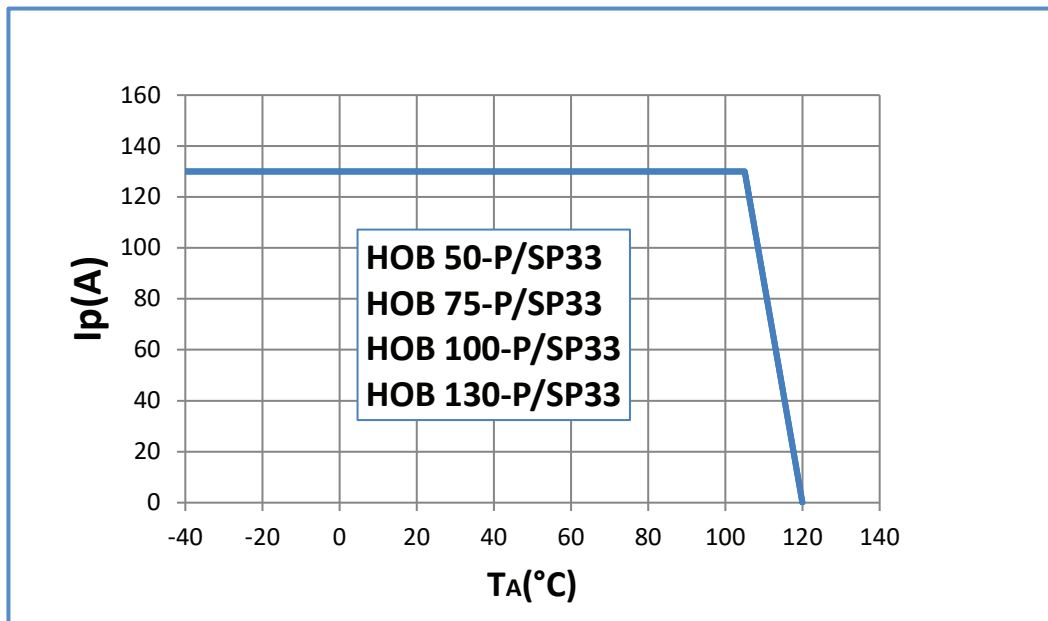

Unless otherwise stated (e.g. “100 % tested”), the LEM definition for such intervals designated with “min” and “max” is that the probability for values of samples to lie in this interval is 99.73 %.

For a normal (Gaussian) distribution, this corresponds to an interval between  $-3$  sigma and  $+3$  sigma. If “typical” values are not obviously mean or average values, those values are defined to delimit intervals with a probability of 68.27 %, corresponding to an interval between  $-\text{sigma}$  and  $+\text{sigma}$  for a normal distribution.

Typical, maximal and minimal values are determined during the initial characterization of the product.

### Maximum continuous DC current

For all ranges

**Important notice:** whatever the usage and/or application, the transducer jumper temperature shall not go above the maximum rating of 120 °C as stated in page 3 of this datasheet.

Dimensions (in mm, general tolerance  $\pm 0.3$  mm)
