EK6-PSX
Information note

What is the Evaluation Kit

The main purpose of the Evaluation Kit is to install software that allows the user to read data from SGX Sensortech sensor module boards.

We offer an Evaluation Kit for all of our sensor modules. The Evaluation Kit includes a USB UART interface and comes with a USB to TTL adapter and cable. In addition, the kit includes easy-to-use testing software that can be installed on any PC, allowing you to test and equally get familiar with our product.

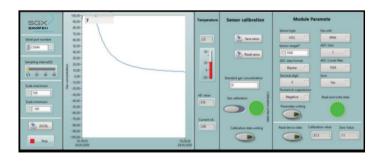

What is included the Evaluation Kit

- UART to USB (TTL) Adapter
- Software Package

Software for the Evaluation Kit

The software displays data from the sensor modules and can be exported. Therefore, it can only read data from the sensor module and cannot write data to it. All of the SGX Sensortech products are delivered factory calibrated.

The evaluation kit only works with our sensor modules **(PS1/PS4-xxxx-MOD)**

Not with an individual sensor.

Small size | Low cost | Fast response

Quality, Safety, Responsibility
