# RENESAS

2Mb Advanced LPSRAM (256k word x 8bit)

R10DS0272EJ0101 Rev.1.01 2020.2.20

## Description

The R1LV0208BSA is a family of low voltage 2-Mbit static RAMs organized as 262,144-word by 8-bit, fabricated by Renesas's high-performance 0.15um CMOS and TFT technologies. The R1LV0208BSA has realized higher density, higher performance and low power consumption. The R1LV0208BSA is suitable for memory applications where a simple interfacing, battery operating and battery backup are the important design objectives. The R1LV0208BSA has been packaged in 32-pin sTSOP.

## Features

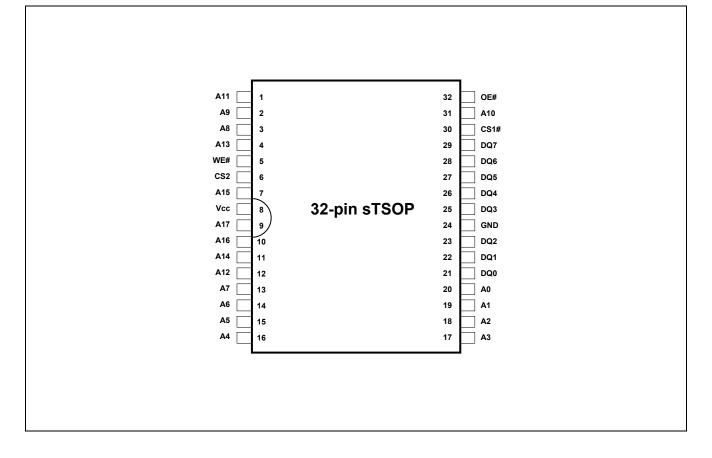

- Single 2.7V~3.6V power supply
- Small stand-by current: 1µA (3.0V, typical)
- No clocks, No refresh
- All inputs and outputs are TTL compatible.
- Easy memory expansion by CS1# and CS2
- Common Data I/O
- Three-state outputs: OR-tie Capability
- OE# prevents data contention on the I/O bus

## **Ordering Information**

| Orderable part name | Access<br>time | Temperature<br>range | Package           | Shipping container |
|---------------------|----------------|----------------------|-------------------|--------------------|
| R1LV0208BSA-5SI#B1  | 55             | 40                   | 8mm×13.4mm 32-pin | Tray               |
| R1LV0208BSA-5SI#S1  | 55 ns          | -40 ~ +85°C          | plastic sTSOP     | Embossed tape      |

# **Pin Arrangement**

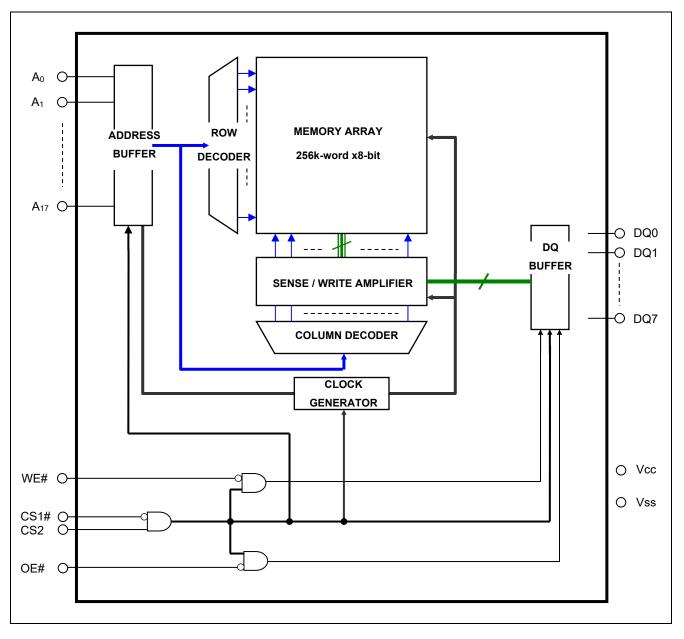

# **Pin Description**

| Pin name   | Function          |  |
|------------|-------------------|--|
| Vcc        | Power supply      |  |
| Vss (GND)  | Ground            |  |
| A0 to A17  | Address input     |  |
| DQ0 to DQ7 | Data input/output |  |
| CS1#       | Chip select 1     |  |
| CS2        | Chip select 2     |  |
| WE#        | Write enable      |  |
| OE#        | Output enable     |  |

# **Block Diagram**

# **Operation Table**

| CS1# | CS2 | WE# | OE# | DQ0~7  | Operation      |
|------|-----|-----|-----|--------|----------------|
| Х    | L   | Х   | Х   | High-Z | Stand-by       |
| Н    | Х   | Х   | Х   | High-Z | Stand-by       |
| L    | Н   | L   | Х   | Din    | Write          |
| L    | Н   | Н   | L   | Dout   | Read           |
| L    | Н   | Н   | Н   | High-Z | Output disable |

Note 1. H: V\_{IH} L:V\_{IL} X: V\_{IH} or V\_{IL}

# **Absolute Maximum**

| Parameter                                   | Symbol | Value                                       | unit |
|---|--------|---|------|
| Power supply voltage relative to Vss        | Vcc    | -0.5 to +4.6                                | V    |
| Terminal voltage on any pin relative to Vss | VT     | -0.5 <sup>*1</sup> to Vcc+0.5 <sup>*2</sup> | V    |
| Power dissipation                           | Ρτ     | 0.7   | W    |
| Operation temperature                       | Topr   | -40 to +85                                  | °C   |
| Storage temperature range                   | Tstg   | -65 to 150                                  | °C   |
| Storage temperature range under bias        | Tbias  | -40 to +85                                  | °C   |

Note 1. -3.0V for pulse  $\leq 30$ ns (full width at half maximum)

2. Maximum voltage is +4.6V.

# **DC Operating Conditions**

| Parameter                 | Symbol | Min. | Тур. | Max.    | Unit | Note |
|---------------------------|--------|------|------|---------|------|------|
| Supply voltage            | Vcc    | 2.7  | 3.0  | 3.6     | V    |      |
|                           | Vss    | 0    | 0    | 0       | V    |      |
| Input high voltage        | VIH    | 2.0  | -    | Vcc+0.3 | V    |      |
| Input low voltage         | VIL    | -0.3 | -    | 0.6     | V    | 1    |
| Ambient temperature range | Та     | -40  | -    | +85     | °C   |      |

Note 1. -3.0V for pulse  $\leq 30$ ns (full width at half maximum)

## **DC Characteristics**

#### Write Cycle

| Parameter                          | Symbol          | Min. | Max. | Unit | Note |
|------------------------------------|-----------------|------|------|------|------|
| Write cycle time                   | twc             | 55   | -    | ns   |      |
| Address valid to end of write      | t <sub>AW</sub> | 50   | -    | ns   |      |
| Chip select to end of write        | tcw             | 50   | -    | ns   | 5    |
| Write pulse width                  | twp             | 45   | -    | ns   | 4    |
| Address setup time                 | tas             | 0    | -    | ns   | 6    |
| Write recovery time                | twR             | 0    | -    | ns   | 7    |
| Data to write time overlap         | t <sub>DW</sub> | 25   | -    | ns   |      |
| Data hold from write time          | t <sub>DH</sub> | 0    | -    | ns   |      |
| Output enable from end of write    | tow             | 5    | -    | ns   | 2    |
| Output disable to output in high-Z | tонz            | 0    | 20   | ns   | 1,2  |
| Write to output in high-Z          | twнz            | 0    | 20   | ns   | 1,2  |

Note 1. t<sub>CHZ</sub>, t<sub>OHZ</sub> and t<sub>WHZ</sub> are defined as the time at which the outputs achieve the open circuit conditions and are not referred to output voltage levels.

- 2. This parameter is sampled and not 100% tested.
- 3. At any given temperature and voltage condition, t<sub>HZ</sub> max is less than t<sub>LZ</sub> min both for a given device and from device to device.

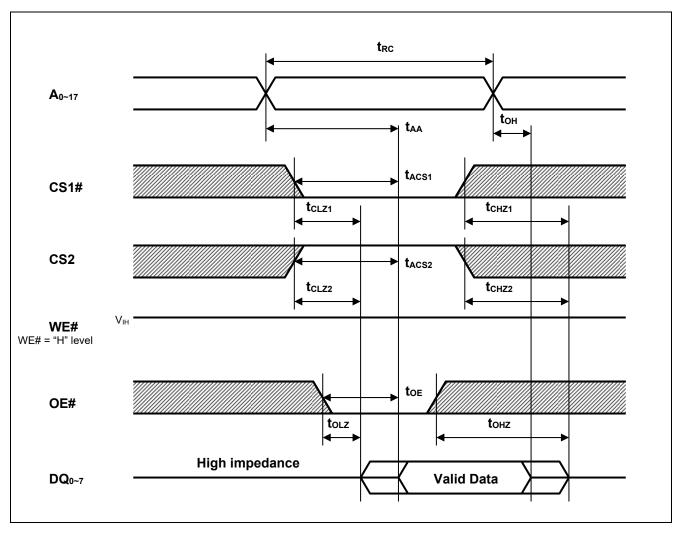

4. A write occurs during the overlap of a low CS1#, a high CS2, a low WE#.
A write begins at the latest transition among CS1# going low, CS2 going high and WE# going low.
A write ends at the earliest transition among CS1# going high, CS2 going low and WE# going high.
t<sub>WP</sub> is measured from the beginning of write to the end of write.

- 5. t<sub>CW</sub> is measured from the later of CS1# going low or CS2 going high to end of write.
- 6. t<sub>AS</sub> is measured the address valid to the beginning of write.
- 7. twR is measured from the earliest of CS1# or WE# going high or CS2 going low to the end of write cycle.
- 8. Don't apply inverted phase signal externally when DQ pin is output mode.

## Low Vcc Data Retention Characteristics

Note 1. Typical parameter indicates the value for the center of distribution at 3.0V (Ta= 25°C), and not 100% tested.

CS2 controls address buffer, WE# buffer, CS1# buffer, OE# buffer and Din buffer. If CS2 controls data retention mode, Vin levels (address, WE#, CS1#, OE#, DQ) can be in the high impedance state.
 If CS1# controls data retention mode, CS2 must be CS2 ≥ Vcc-0.2V or 0V ≤ CS2 ≤ 0.2V. The other input levels (address, WE#, OE#, DQ) can be in the high impedance state.
