

# EV6545-F-00A

45V, 2.5A, Simple Three-Phase Power Stage in a TSSOP-28EP Package Evaluation Board

## DESCRIPTION

The EV6545-F-00A evaluation board is designed to demonstrate the capabilities of the MP6545, a three-phase power stage. It can be used to drive brushless DC (BLDC) motors and other loads.

The MP6545 can operate from a supply input voltage ( $V_{IN}$ ) of up to 45V, and can deliver load currents up to 2.5A per phase.

The MP6545 has separate high-side (HS) and low-side (LS) input pins for each output pin. The input control signals can be generated on the board or can come from an external controller via the connector on the board.

The MP6545 is available in a TSSOP-28EP package. It is recommended to read the MP6545 datasheet before making any changes to the EV6545-F-00A.

## PERFORMANCE SUMMARY <sup>(1)</sup>

Specifications are at  $T_A = 25^\circ\text{C}$ , unless otherwise noted.

Parameters	Conditions	Value
Input voltage ( $V_{IN}$ ) range		4.5V to 45V
Maximum output current ( $I_{OUT}$ )		2.5A

## QUICK START GUIDE

1. Preset the input power supply ( $V_{IN}$ ) between 4.5V and 45V.
2. Connect the input power supply terminals to:
  - a. Positive (+):  $V_{IN}$
  - b. Negative (-): GND
3. Preset the VCC supply ( $V_{CC}$ ) to 3.3V or 5V.
4. Connect the VCC supply terminals to:
  - a. Positive (+): VCC
  - b. Negative (-): GND
5. Set the input control and logic signal through the CN1 connector via the external MCU, or manually through SW1. Table 1 shows the input logic for the high-side (HSx) and low-side (LSx) inputs.

**Table 1: Input Logic Truth**

HSx	LSx	OUTx
0	0	Hi-Z
0	1	L
1	0	H
1	1	Hi-Z
