

FT-330 Flow Turbine - Obsolescence Notice

May 1, 2023

Subject: FT-330 Flow Turbine - Obsolescence Notice

Dear Valued Customer,

This communication is being shared to inform you that our FT-330 Flow Turbine series of products have been announced obsolete and are no longer available.

Please refer to the list below for part numbers affected:

- 226000
- 226100

For the past months we've been unable to fulfill orders for the FT-330 due to being line down at our manufacturing facility for this product series. Following several investigations into resuming production, the necessary replacement equipment could not be secured, and so despite all efforts the FT-330 has now been moved to the final stage of its lifecycle, obsolescence.

Unfortunately, being unable to produce any more products from the FT-330 series also means that we cannot accept any further orders or offer any last time buys, and any existing open order has now been cancelled through our Customer Services team. Standard terms and conditions apply.

Please refer to the below table outlining products obsoleted as well as next best alternative products:

Product Family	Obsoleted Product Series	Next Best Alternative Product Series	Next Best Alternative Product Series Data Sheet Link
Flow	FT-330	FT-110	catalog-ft110-series (gemssensors.com)

The FT-110 product series offers similar fit, form, and function to the FT-330, and it is also NSF/ANSI 61 certified.

For any questions regarding this notice or the next best alternative product series, please contact our sales representatives.

Thank you for your continued business and support.
