Description

The **X-NUCLEO-OUT14A1** is an industrial digital output expansion board for **STM32 Nucleo**. It provides a powerful and flexible environment for the evaluation of the driving and diagnostic capabilities of the **ISO808A-1** octal high-side smart power solid state relay, with embedded galvanic isolation and 20MHz SPI control interface, in a digital output module connected to 1.0 A industrial loads.

The **X-NUCLEO-OUT14A1** directly interfaces with the microcontroller on the **STM32 Nucleo** driven by GPIO pins and Arduino® R3 connectors.

The galvanic isolation between the microcontroller and the process stage is guaranteed by the **ISO808A-1**.

The expansion board can be connected to either a **NUCLEO-F401RE** or a **NUCLEO-G431RB** development board.

It is also possible to evaluate a 16 channel digital output system enabling the daisy chaining feature on two **X-NUCLEO-OUT14A1** stacked expansion boards.
