

# Flasher Hub-12

## Overview

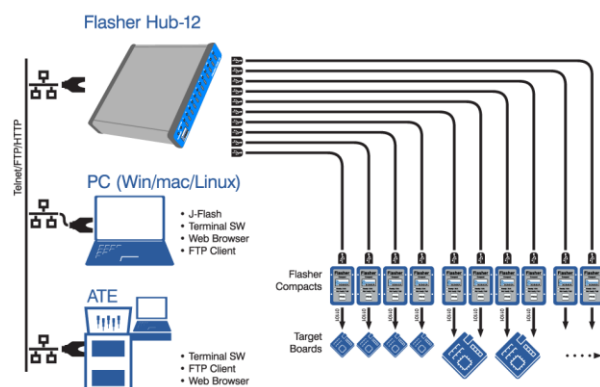

SEGGER's Flasher Hub-12 controls up to 12 Flasher Compact units serving as individual channels for parallel, high-speed gang programming. Each channel can be configured to program a different device or a different firmware image.

The Flasher Hub-12 is set up just once per channel using SEGGER's Flasher software package. The software depends on the type of flash chip being programmed. The Hub can receive commands and send results "stand-alone" via TELNET, a desktop PC is not required for control.

The combination of a single Flasher Hub-12 and up to 12 Flasher Compacts is the perfect solution for high-volume multi-panel and multi-target mass production.

## Parallel programming

The Flasher Hub controls multiple Flasher Compacts. A single Flasher Hub-12 supports up to 12 Flasher Compacts, and up to 4 Flasher Hub-12 devices can be chained, enabling the administration and control of up to 48 programming channels. Each Flasher can be configured individually to program different targets with different target firmware simultaneously.

## Key features

- Scalability: Up to 48 individual parallel programming channels with their own circuit memory
- Reliability
- Longevity
- Built-in web & FTP server for easy setup
- Multi-platform: Includes application software for Linux, macOS, and Windows
- No license required. No hidden costs. No future costs.
- Future proof: Software, firmware updates as well as new flash loaders are free of charge.

## Package content

- Flasher Hub-12
- Power adapter
- USB cable
- Note, Flasher Compacts need to be purchased separately
