SiBRAIN for ATMEGA1280

PID: MIKROE-5847

SiBRAIN is a standardized microcontroller add-on board, which allows very simple installation and replacement of the microcontroller unit (MCU) on a development board equipped with the SiBRAIN Card socket. By introducing the new SiBRAIN standard, we have ensured the absolute compatibility between the development board and any of the supported MCUs, regardless of their pin number and compatibility. SiBRAIN is equipped with two 168-pin mezzanine connectors, allowing it to support even MCUs with extremely high pin count. The clever design allows very simple usage, following the well-established plug & play concept of the Click board ™ line of product.

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

health and safety management system.

Specifications

Туре	8th Generation
Architecture	AVR (8-bit)
MCU Memory (KB)	128
Silicon Vendor	Atmel
Pin count	100
RAM (Bytes)	81920
Supply Voltage	3.3V,5V
