DESCRIPTION

The U440/441 are matched pairs of JFETs mounted in a single TO-71 package. This two-chip design reduces parasitics and gives better performance at very high frequencies while ensuring extremely tight matching. These devices are an excellent choice for use as wideband differential amplifiers in demanding test and measurement applications.

The hermetically-sealed TO-71 package is available with full military screening per MIL-S-19500 (see Military Information).

For similar products in SO-8 packaging see the SST440/SST441 data sheet. For low-noise options, see the SST/U401 series data sheet. For low-leakage alternatives, see the U421/423 data sheet.
