# LD30CPBR60BPxxIO - IO-Link

#### Photoelectric Laser sensor with BGS, FGS and IO-Link communication

The LD30CPBR60BPxxIO are a part of the latest generation of high performance Photoelectric Laser sensors designed to solve challenging detection tasks due to Laser, Background Suppression, Foreground Suppression and Dual Detection features. The small light spot makes detection very precise.

The sensors are implemented in the compact 10 x 20 x 30 mm ABS housing that are acknoledged world wide.

New implemented functions with weight on functionality, reliability, Predictive maintenance make these sensors ideal for Industry 4.0.

#### Benefits

- Red laser class 1 assure reliable detection
- Red Laser BGS or FGS Long Range sensor with IO-Link with an adjustable distance of 20 to 625 mm, either by Teach-button or via IO-Link.
- Dual Detection mode Combine Foreground detection with Diffuse Reflective detection.
- · Triangulating sensing principle.
- Application functions: Dual Detection, Pattern Recognition, Speed & Length, Divider function and Object & Gap Monitoring.
- Neighbour Immunity, select up to 3 neighboring sensors.
- Easy customization to specific OEM requests by use of the build in IO-Link functionalities.
- The output can be operated either as a standard switching output or in IO-Link mode.
- Fully configurable via output IO-Link v 1.1. Electrical outputs can be configured as PNP / NPN / Push-Pull / External input, normally open or normally closed.
- Timer functions can be set, such as ON-delay, Offdelay, and one shot.
- Logging functions: Temperature, detecting counter, power cycle and operating hours.
- Detection modes Background suppression (BGS), single point, two point, windows and foreground suppression (FGS) mode.
- · Logic functions: AND, OR, XOR and Gated SR-FF.
- Analogue output: In IO-Link mode the sensor will generate 16 bit analogue process data output representing various selectable process data such as received signal level.

#### **Applications**

**Detecting of transparent** or translucent plastic bottles.

The detection distance is almost independent of the colour of the object to detect.

**Dual Detection:** A dual detection sensor works as a foreground suppression sensor combined with a diffuse reflective sensor. This sensing principle evaluates both the position change as well as the light intensity of the received light. This allow detection of eg. transparant PET bottles.

**Pattern Recognition**: An easy way to verify that a product is manufactured to the specification e.g. Furniture production where tabs or holes has to be with a defined pattern.

Speed and Length: Monitor the speed and length of an object on a conveyour for e.g. sorting on size.

**Divider function**: A de-central counting function that gives a signal when a preset count level is reached e.g. when a certain amount of items are packed in a carton box it ask for a new box.

Object and Gap Monitoring: Function that can sort out good objects and gaps between them so e.g. a

packaging machine only reveive objects with the correct size and gaps.

#### **Main functions**

- The detection distance is almost independent of the colour of the object to detect.
- The sensor can be operated in IO-Link mode once connected to an IO-Link master or in standard I/O mode.
- · Measured sensing distance as process data.
- · Neighbour interference protection.
- Sensing distance by teach-button, teach by wire or by IO-link parameter.
- · Quality of Run and Quality of Teach result.
- Temperature data for preventive maintenance.
- · Front-end check for preventive maintenance.
- Dual Detection

#### **Dual Detection**

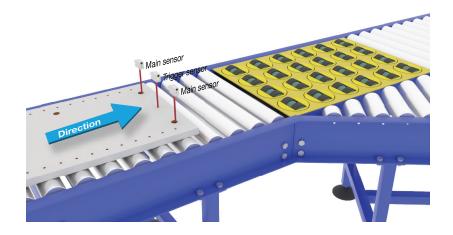

A standard Foreground Suppression sensor expects to see a background within a certain specified tolerance. An object is detected if the received light's position exceeds those tolerances set for the background.

A standard Diffuse Reflective (energized) sensor detects the intensity of the received light and if it exceeds a set threshold an object is detected.

A Dual Detection sensor works as a Foreground Suppression sensor combined with a Diffuse Reflective sensor. This sensing principle evaluates both the position change as well as the light intensity of the received light.

#### **Pattern Recognition**

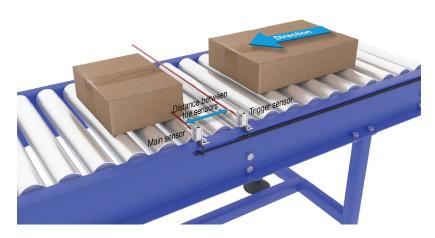

Carlo Gavazzi Industri A/S 7

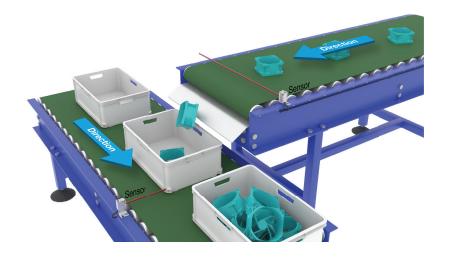

Function description	The Pattern recognition function detects a pattern (e.g. a row of holes or pins) and compares the order with a pre-teached reference pattern.	
Conditions	Two sensors (Main sensor and Trigger sensor) are needed for this function.	
Settings	<ul> <li>The Trigger sensor has to detect the full length of the body that contains the pattern.</li> <li>The Main sensor has to be aimed at the e.g. holes or pins that constitute the pattern.</li> </ul>	

# **Speed and Length**

Function description	This function is designed to monitor the length of an object as well as the speed of a conveyour belt. The actual value of the length in [mm] and the speed in [mm/s] are directly available on the IO-Link master.	
Conditions	Two sensors (Main sensor and Trigger sensor) are needed for this function.	
Settings	Distance between sensors.	25 150 mm Factory settings: 100 mm

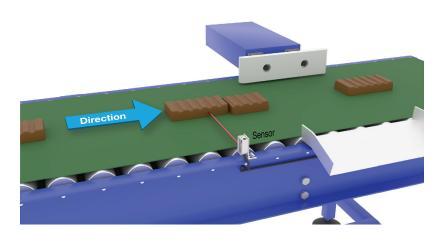

## **Divider function**

Function description	This function can be used to e.g. monitor how many items are packed into a carton box. Once the preset number is reached the sensor gives an output so the full box can be replaced.	
Conditions	Only one sensor is needed for this function.	
	A counter value must be set in the sensor.	
Settings	Counter limit.	160 000
	Counter IIIIII.	Factory settings: 5

# **Object and Gap Monitoring**

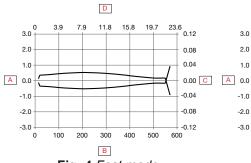

Function description	This function is designed to monitor, that the length of an object and the gap between the following object on a conveyer belt, are within certain limits.	
Conditions	Only one sensor is needed for this function.	
	An acceptable minimum and maximum time [ms] must be set for both the object size and a gap size between two objects represented by the time it takes to pass the sensor.	
	Object minimum time.	1060 000 ms Factory settings: 500 ms
Settings	Object maximum time.	1060 000 ms Factory settings: 10 000 ms
	Gap minimum time.	1060 000 ms Factory settings: 500 ms
	Gap maximum time.	1060 000 ms Factory settings: 10 000 ms
Outputs	Output 1 is active when an object is outside the set limits.  Output 2 is active when the gap between two objects is outside the set limits.	

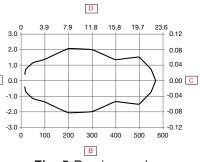

## Alarm settings

	SSC1	SSC2
Safe limits	• 0 100 % of actual SP	• 0 100 % of actual SP
	Factory settings: 1%	Factory settings: 1%
Dust alarm	Safe limits are used for dust alarm level.	
	High threshold -50 +150 °C	
	• Low threshold -50 +150 °C	
Temperature alarm	Factory settings:	
	High value 60 °C	
	Low value -20 °C

Voltage drop (U <sub>d</sub> )	≤ 1.0 VDC @ 100 mA		
Protection	Short circuit, reverse polarity, transients		
	DC-12	Control of resistive loads and solid-	
Utilization category	DC-12	state loads with optical isolation	
	DC-13	Control of electromagnets	
Capacitive load	100 nF @ 100 mA, 24 VDC

## Operation diagram

## For default factory sensor

#### Tv = Power-ON delay

Power supply	ON	
Target (Object)	Present	
Break output (N.C.)	ON	Tv.
Make output (N.O.)	ON	Tv

## Response times

#### Fast mode

	Nominal de	Nominal detection speed		ion speed
Operating frequency (f)	≤ 200 Hz	≤ 200 Hz		
Pagnanas timas	≤ 2.5 ms	OFF-ON (t <sub>on</sub> )	≤ 2.0 ms	OFF-ON (t <sub>on</sub> )
Response times	≤ 2.5 ms	ON-OFF (t <sub>off</sub> )	≤ 2.0 ms	ON-OFF (t <sub>OFF</sub> )

#### **Precise mode**

	Nominal detection speed		Max. detection speed	
Operating frequency (f)	≤ 40 Hz		≤ 50 Hz	
Pagnanga timag	≤ 12.5 ms	OFF-ON (t <sub>on</sub> )	≤ 10 ms	OFF-ON (t <sub>on</sub> )
Response times	≤ 12.5 ms	ON-OFF (t <sub>OFF</sub> )	≤ 10 ms	ON-OFF (t <sub>OFF</sub> )

## Indication

Green LED	Yellow LED	Power	Function			
SIO and IO-Link mode						
ON	ON	ON	ON (stable)* SSC1			
ON	OFF	ON	OFF (stable)* SSC1			
OFF	ON	ON	ON (Not stable) SSC1			
OFF	OFF	OFF	OFF (Not stable) SSC1			
Flashing 1 Hz 10% dutycycle	-	ON	Connected via IO-Link			
-	Flashing 10 Hz 50% dutycycle	ON	Output short-circuit			
-	Flashing 0.520 Hz 50% dutycycle		Timer triggered indication			
		IO-Link mode only				
● Flashing 1 HZ ON 900 ms OFF 100 ms	-	-	Sensor is in IO-Link mode and SSC1 is stable			
● Flashing 1 HZ ON 100 ms OFF 900 ms	-	-	Sensor is in IO-Link mode and SSC1 is not stable			
Flashing 2 Hz 50% dutycycle		ON	Find my sensor

# **Compatibility and conformity**

# Approvals and markings

General reference	Sensor designed according to EN60947-5-2			
MTTF <sub>d</sub>	133.5 years EN ISO 13849-1, SN 29500			
CE-marking	CE			
Approvals	CULSO8) (UL508) FDA accession number: 2220061-000			
Other Approvals	LASER 1	Class 1 laser according to IEC 60825-1:2014 Complies with IEC / EN 60825-1:2014 and 21 CFR 1040.10 1040.11 except for deviations pursuant to Laser Notice No. 56, dated January 19, 2018		

## IO-Link

IO-Link revision	1.1
Transmission rate	COM2 (38.4 kbaud)
SDCI-Norm	IEC 61131-9
Profile	Smart sensor profile 2nd edition, common profile
Min. cycle time	5 ms
SIO mode	Yes
Min. master port class	A (4-pin)
Process data length	32 bit

# **Delivery contents and accessories**

#### **Delivery contents**

- · Photoelectric switch: LD30CPBR60BPxxIO
- · Laser safety note
- Packaging: Plastic bag

#### **Accessories**

- Mounting bracket: APD30-MB1 or APD30-MB2 to be purchased separately
- Connector type: CO..54NF... series to be purchased separately

#### **Further information**
