Introduction

This DFRobot SHT31 digital temperature and humidity sensor is based upon the Sensirion SHT31 sensor IC. Thanks to Sensirion's CMOSens® technology, highly integrated capacitive humidity sensing components and band-gap temperature sensing components, the SHT31 offers high reliability and long-term stability with low power consumption, fast response and strong anti-interference ability. The sensor supports IIC communication, and is compatible with 3.3V/5V controllers like Arduino, micro:bit, ESP32. It is easy to achieve precise and high-reliability temperature and humidity sensing for urban environment monitoring, intelligent buildings, industrial automation, smart home and other Internet of Things applications.

>

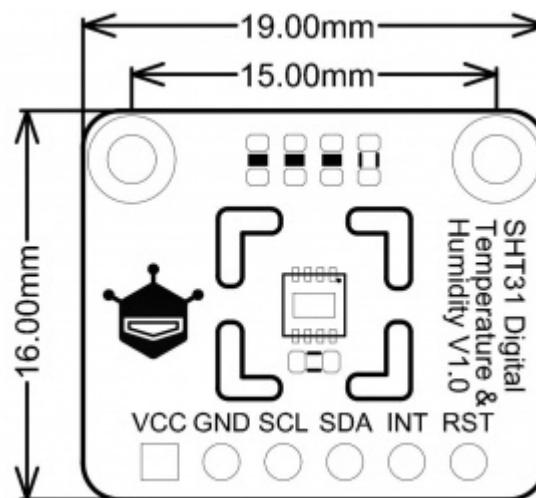

SHT31 is the standard version of the SHT3x series. It provides humidity accuracy $\pm 2\%$ RH @ 0%RH~100%RH (at 25°C), and temperature accuracy $\pm 0.2^\circ\text{C}$ @ 0°C ~90°C (typical).

- Operating Voltage: 2.15~5.5V
- Operating Current: <1.5mA
- Humidity Accuracy: ±2%RH
- Humidity Detection Range: 0%RH~100%RH
- Temperature Accuracy: ±0.2°C
- Temperature Detection Range: -40°C~125°C
- Communication: IIC
- Outline Dimension: 19x16mm/0.75x0.63"
- Mounting Hole Size: 2mm/0.08"
- Mounting Hole Pitch: 15mm/0.59"

Sample Code 1- Single Measurement Mode

In single measurement mode, the sensor collects data every time the controller board sends out the data collecting command. The power consumption could be very low in this mode since users can read data according to their needs.

        Serial.print(data.Humidity);
        Serial.println(" %RH");
    }
/*
delay(1000);
}
```

- Result

Print out the temperature and humidity information from the serial port.

The screenshot shows a terminal window titled "COM8". The window contains the following text:

```
Chip serial number67005747
-----Read adta in single measurement mode-----
Ambient Temperature (°C/F):21.58 C/53.57 F Relative Humidity (%RH):51.34 %RH
Ambient Temperature (°C/F):21.54 C/53.57 F Relative Humidity (%RH):51.32 %RH
Ambient Temperature (°C/F):21.56 C/53.54 F Relative Humidity (%RH):51.16 %RH
Ambient Temperature (°C/F):21.53 C/53.57 F Relative Humidity (%RH):50.96 %RH
Ambient Temperature (°C/F):21.52 C/53.54 F Relative Humidity (%RH):50.86 %RH
Ambient Temperature (°C/F):21.53 C/53.54 F Relative Humidity (%RH):50.73 %RH
Ambient Temperature (°C/F):21.53 C/53.53 F Relative Humidity (%RH):50.57 %RH
Ambient Temperature (°C/F):21.52 C/53.54 F Relative Humidity (%RH):51.04 %RH
```

At the bottom of the window, there are several control buttons: "Autoscroll" (checked), "Show timestamp" (unchecked), "Newline" (dropdown menu), "9600 baud" (dropdown menu), and "Clear output".

Sample Code 2- Period Measurement Mode

In period measurement mode, the sensor collects data at the user-set frequency.

Sample Code 3- Temperature & Humidity Alarm

Set the temperature and humidity threshold. The pin INT generates alarm signal when exceeding the threshold.

When using this example, the pin INT of the sensor needs to be connected to the corresponding interrupt pin of main-board, refer to the pin list in the code below:

Note: the pin INT only works properly in period measurement mode.
