Overview

Synergy Series Gasket for Ford Explorer Vehicles

The Taoglas MGS.01 is a robust rubber gasket mount, designed to be mounted on the roof ribs of the Ford Explorer, ensuring a secure and weather-tight seal. With a unique design, when mounted on the Ford Explorer's roof ribs, the rubber gasket, accommodates the 59mm rib and maintaining a height of less than 80mm, which is essential to ensure the seamless integration of the Synergy Series Antennas while maintaining the vehicle's functionality, aesthetics, and weather resistance.

Main benefits:

- **Compatibility:** The gasket must be compatible with the Synergy Series.
- **Roof Rib Fitment:** The gasket must be designed to fit precisely over the 59mm roof rib.
- **Sealing Properties:** The gasket creates an effective seal between the Synergy Series Antennas and the vehicle's roof.
- **Easy Installation:** The design facilitates straightforward installation, allowing for efficient mounting on the roof ribs.

Contact your regional Taoglas customer support team for further information. This bracket is fully compatible with all of our standard Synergy Series. See below:
