The TIB-REM480 is a compact, DIN-rail mountable redundancy module for failover operation of AC/DC power supplies. The redundancy function is available for nominal currents of up to 20 A over a wide input voltage range of 11-56 V. Boost currents of up to 60 A are permitted for up to 4 seconds. The TIB-REM480 uses active sharing technology to minimize the power losses during normal operation and in failover mode. The TIB-REM480 can operate at ambient temperatures between -20°C and +60°C without derating and without the need for active cooling. The TIB-REM480 is specifically designed, tested, and approved for operation with Traco Power’s TIB line of DIN-rail mountable power supplies.

Function Specification

Block Diagram:

Balance OK LED (Green)		
Behaviour		Meaning
On		Input voltages are balanced to each other. Accuracy of current sharing is very high (Condition: $V_{in 1} = V_{in 2} (\pm 0.2 \text{ VDC})$)
Off		Input voltages are not balanced to each other. Accuracy of current sharing will be inaccurate (Condition: $V_{in 1} \neq V_{in 2} (\pm 0.2 \text{ VDC})$)
Input Status LEDs Vin1 OK (Green) & Vin2 OK (Green)		
Behaviour		Meaning
Vin 1 OK	Vin 2 OK	
Off	Off	- Voltage not present or out of Input Voltage Range
Off	On	- Voltage on Vin 2 OK - Voltage on Vin 1 not present - Voltage on Vin 1 out of Input Voltage Range (Condition: Voltage on Vin 1 < Vin 2 - 2 VDC)
On	Off	- Voltage on Vin 1 OK - Voltage on Vin 2 not present - Voltage on Vin 2 out of Input Voltage Range (Condition: Voltage on Vin 2 < Vin 1 - 2 VDC)
On	On	Voltage on Vin 1 and Vin 2 OK Input voltages are balanced to each other. (Condition: $V_{in 1} = V_{in 2} (\pm 2.0 \text{ VDC})$)
