ST7 Low Speed USB Evaluation Board

This kit can be used to develop USB Class applications:

- In-Application Programming (IAP) hardware support (DFU Device Firmware Upgrade)
- HID (Human Interface Device) application demonstrator (LEDs, buttons, trimmer)
- Wrapping Area
- ST72F61/62/63B MCU Family support

A **Windows 98** applet is supplied as well as **USB** firmware libraries for running the peripheral device.

Package Contents

- Two ST7 Low-speed USB microcontroller devices: ST72F62 in SDIP42 package and ST72F63B in SDIP32 package.
- One USB evaluation board printed circuit board
- CD-ROMs

Memory & Peripherals**Survey**

How do you like this microcontroller support site ?
(not whole ST site)

It saved me hours
Very useful and helpful
I got help in the forums
I found some information
I hardly find what I'm looking for
