Electronics

WH Series

Features:

- High power dissipation up to 300W
- All welded construction
- Suitable for severe environments
- Designed for excellent thermal conductivity to heatsink
- Spade terminal option

All Pb-free parts comply with EU Directive 2011/65/EU amended by (EU) 2015/863 (RoHS3)

Note 1: A_{max} for WH25T is 71.3mm.

Construction

Cap and lead assemblies are fitted to a high purity ceramic substrate. The resistive element is wound onto the substrate and welded to the caps. The wound rod is then molded and fitted into aluminium housing to give optimum stability and reliability.

Marking

The resistors are legend marked with type reference, resistance value and tolerance which will withstand all accepted industrial cleaning fluids. Values are marked in accordance with IEC 60062. WH100 and larger sizes are also marked with date code (YY.WW) and country of origin.

Terminations

WH5 - 100 Terminations are solder dipped copper-clad steel. They meet the strength requirements of IEC 60115-1

clause 9.5 and the solderability requirements of IEC 60115-1 clause 11.1.

WH25T & 50T Terminations are 6.35mm (¼") spade terminals.

WH200 & 300 M6 threaded steel terminals with a set of 4 nuts and washers. The termination robustness is 50N maximum

and the tightening torque is 5Nm maximum.

Note 1: Add 0.05Ω ohmic addition for values <10R.

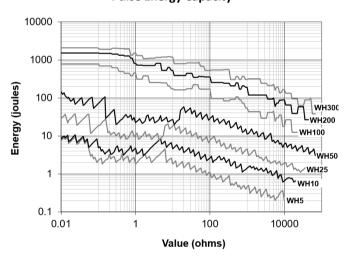

Pulse & Overload Performance

Overload Performance

Note: For durations <0.1s use the Pulse Energy Capacity graph.

Pulse Energy Capacity

Application Notes

After soldering, care should be taken to ensure that there are no flux residues on the end faces of the molding compound, otherwise insulation resistance will be reduced. The minimum surface tracking distances from termination to casing are shown in the Physical Data tables as dimension Dt.

It is recommended that the resistor base should be coated thinly with heatsink compound before mounting so as to obtain the stated operating characteristics. The heatsink compound increases thermal conductivity to the heatsink.

The standard aluminium heatsinks are defined in the Reference Heatsink Dimensions table. If smaller heatsinks are used then derating should be applied as indicated in the Derating for Reduced Heatsink Dimensions graph. If no heatsink is employed, use the ratings for 1cm^2 .

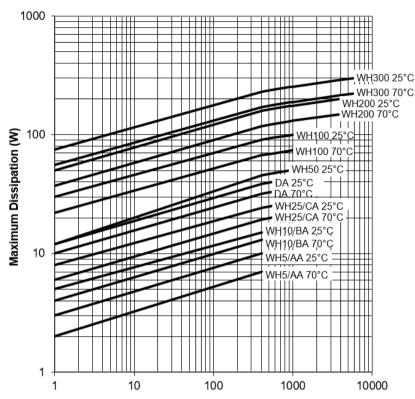

Reference Heatsink Dimensions

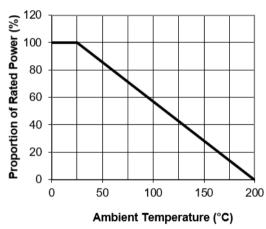

| Туре | IECQ-CECC Style | Al Plate Thickness (mm) | Al Plate Area (cm²) | |
|-----------|--------------------|----------------------------|------------------------|--|
| WH5 | AA | | 410 | |
