

Design Concept

Light and sturdy with a sleek hairline aluminum finish, the lustrous Cooler Master NotePal D1 may very well be your best mobile companion in this new Wi-Fi savvy world.

With efficient functional and ergonomic concept designs, the NotePal D1 sits on an oblique angle creating optimal comfort for laptop users. Either on a desk or on the lap of an on-the-go user, the NotePal D1 takes air from a rear intake and cools down high temperatures with its two 7cm silent fans, dissipating the high temperatures generated by the CPU and GPU trapped inside the laptop housing.

Designed to improve mobility and to offer the best human-to-device optimization, the NotePal D1 at its dimensions and weight is a snug fit in any typical briefcase.
