Front Panel Features

The PXIe-8822/42/62 has two front panel LEDs that show PC status and two user LEDs:

- DRIVE LED—Indicates when an access to the internal drive is occurring.
- PWR OK/FAULT LED—Indicates the controller status. The LED indicates one of the following states:
 - Green ON steady—PXI and onboard power is on and within regulation limits.
 - Green BLINKING—The controller has entered the soft off state and is safe to power down.

Note This status is applicable only when the chassis is set to **Manual Inhibit Mode**.

- Green FADING—The controller has entered the sleep (S3) state.
- OFF—The controller is powered off.
- Red BLINKING—The controller detected a power rail fault when trying to boot.
- Red SOLID—The controller detected a thermal fault and has shut down to protect the system.
- USER LEDs — Two bi-color green/yellow LEDs (USER1 and USER2) that you can define to meet the needs of your LabVIEW application.

The following table lists and describes the 10M/100M/1000M/2.5G LAN connector LED states.

Table 2. 10M/100M/1000M/2.5G LAN Connector LED States

LED	Color	LED State	Condition
