Description

The Long-Life White PLCC-4 SMT LEDs is the latest extension to our White PLCC-4 packages where besides having higher flux output, the Long-Life White PLCC-4 is designed to work under a wide range of environment condition, with reliable and stable performance. The structure and materials used for Long-Life White PLCC-4 enable the packages to endure minimal degradation and hence consistent performance throughout the product life time. Moreover, the Long-Life White PLCC-4 SMT LEDs is a 8-binned product for color, an enhance feature from the previous PLCC-4 white who is binned with 6 color binning only. These tighter color binning will ensure better color grouping with better uniformity.

The Long-Life White PLCC-4 SMT LEDs is suitable to be used in Interior Automotive application, Electronics Signs and Signals application. Besides that, the super wide viewing angle at 120° makes these LEDs ideally suited for instrument cluster panel, push button, or general backlighting in automotive interior, office equipment, industrial equipment, and home appliances. The flat top emitting surface makes it easy for these LEDs to mate with light pipes. With the built-in reflector pushing up the intensity of the light output, these super high brightness LEDs can be used in localized area ambience lighting in applications such as vanity mirror light, cabin light, and car door puddle light. The white color backlighting is suitable to backlight color LCD screens in applications such as GPS (global positioning system) screen in cars.

To facilitate easy pick and place assembly, the LEDs are packed in EIA-compliant tape and reel. Every reel will be shipped in single intensity and color bin, to provide close uniformity.

These LEDs are compatible with IR solder reflow process.

Features

- Industry standard PLCC-4
- High reliability LED package
- Long Life, up to 50,000 hours at 25°C
- High brightness using InGaN dice technologies
- High optical efficiency
- Super wide viewing angle at 120°
- Tight white color binning – 8 bins
- Available is 8mm carrier tape on 7-inch reel
- Stable & Consistent performance with minimum degradation with Silicone Encapsulation
- JEDEC MSL 2a

Applications

- Interior & exterior automotive
 - Instrument panel backlighting
 - Central console backlighting
 - Navigation and audio system backlighting
 - Dome/Map lighting
 - Push button backlighting
 - Number plate illumination
 - Rear reverse lamp indicator
- Electronic signs and signals
 - Decorative lighting
- Office automation, home appliances, industrial equipment
 - Front panel backlighting
 - Push button backlighting

CAUTION: ASMT-SWBM-Nxxxx LEDs are Class 2 ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to Avago Application Note AN-1142 for additional details.

Notes:

1. The luminous intensity I_v is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern may not be aligned with this axis.
2. I_v tolerance $\pm 12\%$

Notes:

1. The chromaticity coordinates are derived from the CIE 1931 Chromaticity Diagram and represent the perceived color of the device.
2. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is $1/2$ the peak intensity.
3. Radiant intensity, I_e in watts / steradian, may be calculated from the equation $I_e = I_V / \eta_V$, where I_V is the luminous intensity in candelas and η_V is the luminous efficacy in lumens / watt.
4. ϕ_V is the total luminous flux output as measured with an integrating sphere after the device has stabilized.
5. Flux tested at mono pulse conditions.

This product is qualified as Moisture Sensitive Level 2a per Jedec J-STD-020. Precautions when handling this moisture sensitive product is important to ensure the reliability of the product. Do refer to Avago Application Note AN5305 Handling of Moisture Sensitive Surface Mount Devices for details.

A. Storage before use

- Unopen moisture barrier bag (MBB) can be stored at <math><40^{\circ}\text{C}/90\% \text{RH}</math> for 12 months. If the actual shelf life has exceeded 12 months and the HIC indicates that baking is not required, then it is safe to reflow the LEDs per the original MSL rating.
- It is not recommended to open the MBB prior to assembly (e.g. for IQC).

B. Control after opening the MBB

- The humidity indicator card (HIC) shall be read immediately upon opening of MBB.
- The LEDs must be kept at <math><30^{\circ}\text{C} / 60\% \text{RH}</math> at all time

and all high temperature related process including soldering, curing or rework need to be completed within 672 hours.

C. Control for unfinished reel

- For any unused LEDs, they need to be stored in sealed MBB with desiccant or desiccator at <math><5\% \text{RH}</math>.

D. Control of assembled boards

- If the PCB soldered with the LEDs is to be subjected to other high temperature processes, the PCB need to be stored in sealed MBB with desiccant or desiccator at <math><5\% \text{RH}</math> to ensure no LEDs have exceeded their floor life of 672 hours.

E. Baking is required if:

- "10%" or "15%" HIC indicator turns pink.
- The LEDs are exposed to condition of $>30^{\circ}\text{C} / 60\% \text{RH}$ at any time.
- The LEDs floor life exceeded 672 hours.

Recommended baking condition: $60 \pm 5^{\circ}\text{C}$ for 20 hours.

Handling Precaution

The encapsulation material of the product is made of silicone for better reliability of the product. As silicone is a soft material, please do not press on the silicone or poke a sharp object onto the silicone. These might damage the product and cause premature failure. During assembly or handling, the unit should be held on the body only. Please refer to Avago Application Note AN 5288 for detail information.
