IDENTITY (As Used on Label and List)

Note: Blank spaces are not permitted if any item is not applicable or no information is available, the space must be marked to indicate that.

Section I

Manufacturer's Name
GPI International Ltd.

Emergency Telephone Number

Address (Number, Street, City State, and ZIP Code)
8/F GP Building, 30 Kwai Wing Road,
Kwai Chung, N.T. H.K.

Telephone Number for information 852-2484-3333

Date of prepared and revision Jul 23, 08

Signature of Prepare (optional)

Section II - Hazardous Ingredients / Identity Information

Hazardous Components:

Description: Approximate % of total weight

Lead: <0.004 Wt%

Mercury: <0.0001 Wt%

Cadmium: <0.0003 Wt%

Manganese Dioxide: ~15 Wt%

Zinc Metal: ~18 Wt%

Potassium hydroxide: ~6 Wt%

NiOOH: ~13 Wt%

Water: ~7.4 Wt%

Section III - Physical / Chemical Characteristics

Boiling Point N.A.
Specific Gravity (H2O=1) N.A.
Vapor Pressure (mm Hg) N.A.
Melting Point N.A.
Vapor Density (AIR=1) N.A.
Evaporation Rate (Butyl Acetate) N.A.
Solubility in Water N.A.
Appearance and Odor Cylindrical Shape, odorless

Section IV – Hazard Classification

Classification N.A.
### Section V – Reactivity Data

Health Hazard (Acute and Chronic) / Toxicological information

- In case of electrolyte leakage, skin will be itchy when contaminated with electrolyte.
- In contact with electrolyte can cause severe irritation and chemical burns.
- Inhalation of electrolyte vapors may cause irritation of the upper respiratory tract and lungs.

### Section VII – First Aid Measures

First Aid Procedures

- If electrolyte leakage occurs and makes contact with skin, wash with plenty of water immediately.
- If electrolyte comes into contact with eyes, wash with copious amounts of water for fifteen (15) minutes, and contact a physician.
- If electrolyte vapors are inhaled, provide fresh air and seek medical attention if respiratory irritation develops. Ventilate the contaminated area.

### Section VIII - Fire and Explosion Hazard Data

Extinguishing Media
- Carbon Dioxide, Dry Chemical or Foam extinguishers

Special Fire Fighting Procedures
- N.A.

Unusual Fire and Explosion Hazards
- Do not dispose of battery in fire - may explode.
- Do not short-circuit battery - may cause burns.
Section IX – Accidental Release or Spillage  
Steps to Be Taken in Case Material is Released or Spilled

- Batteries that are leakage should be handled with rubber gloves.
- Avoid direct contact with electrolyte.
- Wear protective clothing and a positive pressure Self-Contained Breathing Apparatus (SCBA).

Section X – Handling and Storage  
Safe handling and storage advice

- Batteries should be handled and stored carefully to avoid short circuits.
- Do not store in disorderly fashion, or allow metal objects to be mixed with stored batteries.
- Never disassemble a battery.
- Do not breathe cell vapors or touch internal material with bare hands.
- Keep batteries between -30°C and 35°C for prolong storage.

Section XI – Exposure Controls / Person Protection

Section XIII – Disposal Method

Dispose of batteries according to government regulations.
Section XIV – Transportation Information

GP batteries are considered to be “Dry cell” batteries and are unregulated for purposes of transportation by the U.S. Department of Transportation (DOT), International Civil Aviation Administration (ICAO), International Air Transport Association (IATA) and International Maritime Dangerous Goods Regulations (IMDG). The only DOT requirement for shipping these batteries is special provision 130 which states: “Batteries, dry are not subject to the requirements of this subchapter only when they are offered for transportation in a manner that prevents the dangerous evolution of heat (For example, by the effective insulation of exposed terminals). The only requirements for shipping these batteries by ICAO and IATA is Special Provision A123 which states: “An electrical battery or battery powered device having the potential of dangerous evolutions of heat that is not prepared so as to prevent a short-circuit (e.g. in the case of batteries, by the effective insulation of exposed terminals; or in the case of equipment, by disconnection of the battery and protection of exposed terminals) is forbidden from transportation.” The international Maritime Dangerous Goods Code (IMDG) regulate them for ocean transportation under Special Provision 304 which says: Batteries, dry, containing corrosive electrolyte which will not flow out of the battery if the battery case is cracked are not subject to the provision of this Code provided the batteries are securely packed and protected against short-circuits. Example of such batteries are: alkali-manganese, zinc-carbon, nickel metal hydride and nickel-cadmium batteries. Non-dangerous goods.

Such battery have been packed in inner packaging in such a manner as to effectively prevent short circuit and movement that could lead to short circuit.

Section XV – Regulatory Information

Special requirement be according to the local regulatory.

Section XVI – Other Information

The data in this Material Safety Data Sheet relates only to the specific material designated herein.

Section XVII – Measures for fire extinction

In case of fire, it is permissible to use any class of extinguishing medium on these batteries or their packing material. Cool exterior of batteries if exposed to fire to prevent rupture.

Fire fighters should wear self-contained breathing apparatus.
