

Why Sta-Kon Terminals Are Better

Like any other value added manufacturing process, using the best material is only a start. Our Sta-Kon terminals are all manufactured with the customer in mind, not a price tag! The following product features are usually absent in competitive products.

Chamfered/Funneled Terminal Barrel Entry

This feature makes wire insertion faster and easier. Chamfering eliminates wire strand "hang up" and departure upon insertion into the terminal's barrel. The loss of even a couple of wire strands can have negative results on electrical efficiency and resistance to mechanical strain.

Deep Internal Serrations

After the insertion of a wire into the terminal's barrel, a deep serrated interior insures a large area of contact which lowers the resistance of a connection. Upon the mechanical force of tool applied pressure, the wire strands cold flow into the serrated interior. This guarantees electrical resistance lower than the wire to which it is applied. This feature also prevents pullout from vibration and mechanical strain. Deep internal serrations can be compared to the effective holding power of a well treaded tire on a wet highway.

Sta-Kon's Long Barrel Design

If lowering electrical resistance, preventing wire pullout, eliminating a "missed" crimp and an insulator that stays on the barrel during installation are your goals, then, you must design a terminal with a long barrel. The fact is that most competitive barrel lengths range from 20%-50% shorter than the Sta-Kon. The results are usually a stream of electrical failure, rework and added expense. This also provides the insulator with additional surface area, holding tight to the barrel. Many competitive insulators come off during crimping due to a limited barrel length.

able on most 1-piece Sta-Kon terminals:

Platings/Finish

Electroplated-Tin is standard. All others require minimum order quantities and are generally not stocked. Alternative platings as follows: Gold, Silver, Tin-alloys,

| Finish | Suffix | Spec. |
|--------------|-----------|---------------------------------------------|
| Gold Plate | GP | MIL-G-45204 Type II, Grade B, C, D, Class O |
| Nickel Plate | NP | QQ-N-290 Class 2, Grade G |
| Plain Finish | PF | None |
| Silver Plate | SP | MIL-T-16366 Type I or II, 400°F, 204°C |
| Tin Plate | TP | MIL-T-10727 Type I |

To order add the indicated suffix to the regular catalog number.

Nickel, etc.

The following finishes are avail-

Why Sta-Kon Terminals Are Better—continued

Anti-Rotational Tongues

This is a unique feature to the Thomas & Betts ring tongue terminal. This design prevents terminal shorting by keeping the terminal secure in the terminal block. The installer can place a greater number of terminals, closer together without worry.

er electrical flow, void free.

Selective Annealing

Because of the mechanical strength of copper, an installer can experience fatigue associated with repeated installations. For this reason Thomas & Betts puts our terminals through one more step called selective annealing. This process leaves the barrel soft enough to crimp and form around the wire. However, we "cold form" the tongue during the manufacturing process so it remains strong. This is done so the tongue can withstand repeated bends and bolt tightening strain common in most electrical installations. Many competitors attempt to accomplish similar goals by removing valuable material or using a softer copper which has lower conductivity. This increases electrical resistance as well as the odds for shorting and downtime.

Brazed or Overlapped Seam

A long barrel design is of little value unless it is one solid piece. That is why Thomas & Betts brazes the seam on our vinyl insulated Sta-Kon and overlaps the seam on nylon insulated terminals. Many competitive terminals have butted seams. This means increased chances for wirestrand loss, poor resistance, wire pullout and electrical failure. If the installer doesn't position the tool exactly on the correct spot on the barrel, there's likely going to be an improper termination. The butted seam can also fold due to tool-applied pressure piercing the terminals insulation from the inside out. With a brazed or overlapped seam the installer can crimp anywhere along the barrel's surface providing up to 2^{1/2} times the tensile strength of a butted seam terminal, guaranteeing prop-

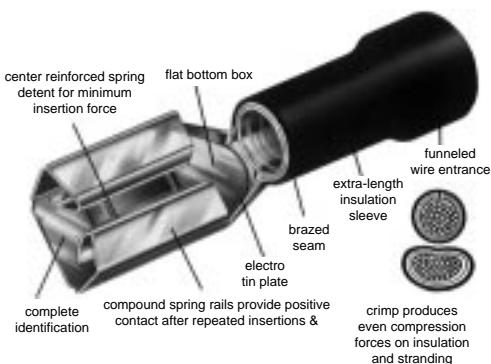

Thomas & Betts developed the first tool-applied solderless terminals and connectors nearly 50 years ago in response to industry awareness of the need for better performance of electrical systems.

Today, sophisticated electrical and electronic equipment requires an even higher degree of reliability.

Here are key factors built into the Sta-Kon terminal and connector line that deliver this reliability:

- Broad product selection
- Job suited tooling
- Testing and approvals
- Field proven performance
- New product development
- Service and availability

Sta-Kon® Technical Data

| Terminals & Splices Insulation Rating | U.L. 94 Flammability | Voltage | Temperature |
|------------------------------------------|-------------------------|---------|-------------|
| Nylon | V-2 | 600V** | 105°C |
| Vinyl | V-0 | 600V** | 105°C |
| TEFZEL* | V-0 | 600V** | 150°C |
| **1000V fixture or sign | | | |
| Disconnects | | 300V | 105°C |

Sta-Kon® Disconnects

- Internal barrel serrations and long barrel provide for maximum tensile strength
- Complete line of installing tools, engineered to match tool with terminal
- Funnel entry insulators allow for easier inserting of wire into barrel
- Color-coded for easy installation

Sta-Kon® Ring, fork & locking fork

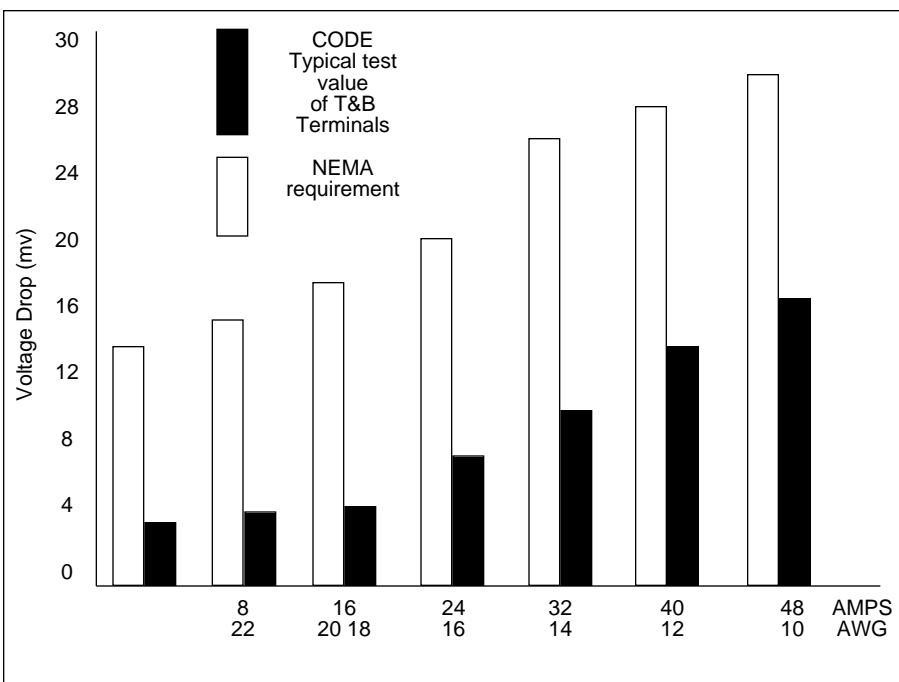

- Complete line of installing tools engineered to match tool with terminal
- First to gain military approval for pressure connections ... many styles available for military applications
- Sta-Kon products exceed test specification requirements of military, U.L. and CSA
- TEFZEL* & Nylon Terminals provided with extra metal sleeve to grip insulation
- Vinyl insulated and bare Sta-Kons feature brazed seam wire barrels which can be crimped at any place on the barrel circumference

The Shure Stake® tools are matched to terminals

The Shure Stake mechanism prevents the dies from releasing the terminal until the proper compression has been completed.

With this method, an operator achieves a reliable crimp everytime.

Performance Data

Voltage Drop Test 500 Cycles

Thomas & Betts terminals show consistently lower millivolt drops than those allowed by NEMA specification.

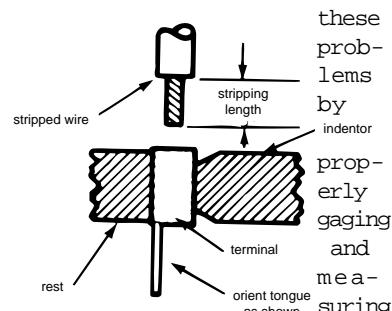

The Proper Installation Procedure for the Quality Assured Connection

The proper installation of terminals, splices and connectors is very important to the efficient performance of an electrical system. The properly installed connector will allow good conductivity through the termination. A poor termination results in a high resistance connection. A poor connector installation may cause damage or failure of an entire system. Certain basic requirements must be met to make a good termination.

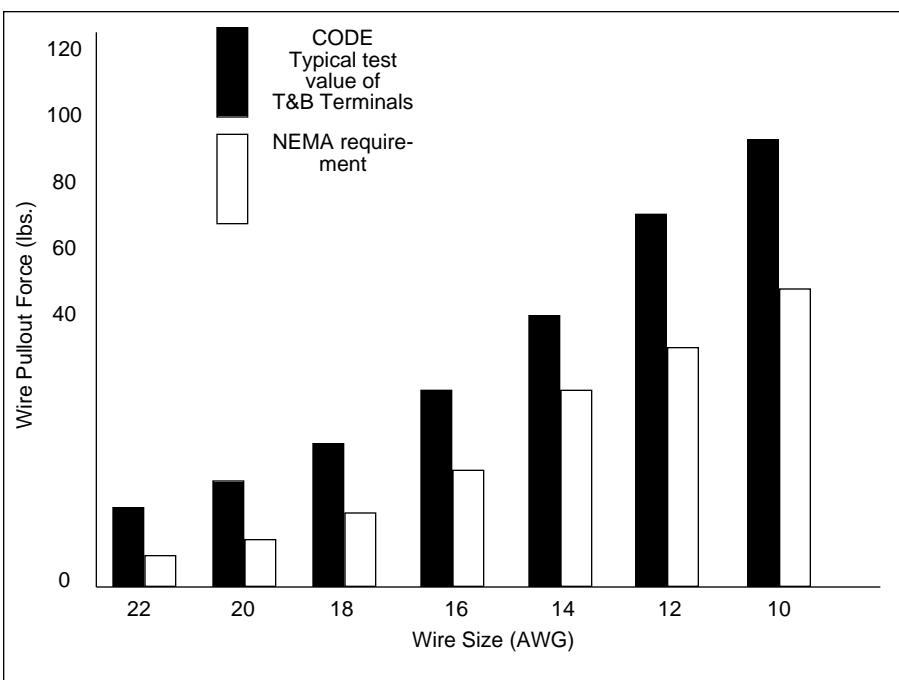

1. Before the connector or terminal is installed on the conductor, follow these recommended practices:

- Strip the insulation carefully so as to avoid nicking or cutting conductor strands
- Strip the insulation to the proper length so that the conductors can be inserted fully into the connector barrel; the wire/cable should be visible in the inspection hole of the lug; the proper strip length can be found on page 49D.

2. Thomas & Betts wire strippers will help eliminate

the depth and length requirements for the conductor. See page 44D for wire strippers.

Wire Pullout Tension Test

Thomas & Betts terminals show consistently higher wire retention forces than those required by NEMA specification.

The Sta-Kon® Terminal Numbering System

Distributor Package 100/50
Bulk "O.E.M." Packaged 1000/500

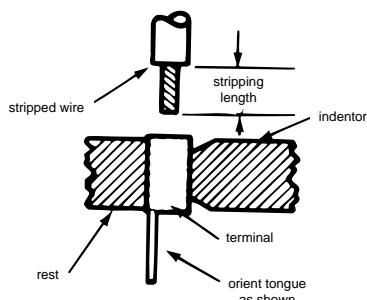

Common to Both Packages

- Letter **A** denotes 22-18 AWG wire range
- Letter **B** denotes 16-14 AWG wire range
- Letter **C** denotes 12-10 AWG wire range
- Letter **R** preceding the above letters indicates the terminal is insulated
- No letter **R**... no insulation ... no exception!

Distributor Packaged

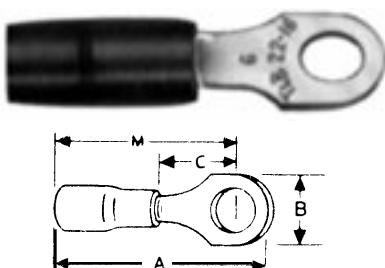

Part numbers are very descriptive indicating insulation and type, stud size, tongue style and the largest maximum wire that can be put inside.

- If the letter **R precedes** the number the part is nylon insulated—RA18-6
- If the letter **R follows** the number the part is vinyl insulated—14RB-8

Installation Procedure

1. Twist the wires to eliminate fanning of strands.
2. Open tool handles fully.
3. Insert terminal in proper die nest and locate it as shown above. When crimping a butt splice, position in proper die nest with window facing indentor.
4. Close handles slightly to secure terminal. Do not deform terminal.
5. Insert properly stripped wire into terminal.
6. Complete crimp by closing handles.

Self-insulated with high dielectric-strength nylon sleeves, these ring terminals are recommended for temperatures up to 105°C. An inner bronze insulation grip sleeve lengthens the flexing radius of the conductor and eliminates conductor creep. The nylon jacket is color-coded:

| Color Code | Wire Range |
|------------|------------|
| yellow | 26-22 |
| red | 22-16 |
| blue | 18-14 |
| yellow | 12-10 |

Most standard bulk catalog numbers can be put on Mylar Tape for reel fed applications (i.e. 12050 tool and application dies).

Please consult tech service.

Please put the suffix M for Mylar Tape
RA2573M.

(Bulk number 1000 and 500 packages.)

A N—Aircraft Wire

U.L. Listed E9809

Installing tools: TBM6/TBM6S, WT2130A (RD Series only)

Note: Not available on Mylar Tape.

These ring terminals are self-insulated with heat shrinkable nylon and internally coated sealant. Upon completed installation, a fully sealed connection is achieved to protect the joint against the degrading effects of galvanic action, corrosion, and environmental exposure.

RAS & RBS stock thickness: .03

RCS stock thickness: .04

U.L. Listed E9809

Installing tool: WT1255

Note: Not available on Mylar Tape.

These ring terminals are self-insulated with a PVC insulation sleeve of extra length to give protection and relieve bending stress at wire's flex point. Brazed seam barrel is serrated to obtain high pull-out value. Terminal is made of high conductivity electrolytic copper, electro-tin plated. Insulation material is color-coded:

| Color Code | Wire Range |
|------------|------------|
| red | 22-16 |
| blue | 18-14 |
| yellow | 12-10 |

U.L. Listed E9809

Installing tools: WT145C, WT2000, WT112M, ERG-2001, ERG-2003, WT2130A (RC, RBC)

Most standard bulk catalog numbers can be put on Mylar Tape for reel fed applications (i.e. 12050 tool and application dies).

Please put the suffix M for Mylar Tape RA2573M. (Bulk number 1000 and 500 packages.)

Catalog numbers with the suffix X indicate an expanded insulation support. This means a wider wire entry to accommodate heavy wall insulation. Ring terminals won't fall free even if the mounting screw loosens.

Stock Thickness:

RA & RB = .03
RC = .04

* Brazed Seam, Lolly-Pop Style Tongue

Installing tools: WT115A D, E, F and G, WT3155A, (D-Series only), TBM6/TBM6S, WT3175

Installing dies: 11802 INDENTOR (D-E-F-G), D-11803-NEST, E-11805-NEST, F-11806-NEST (all ordered separately)

Note: Not available on Mylar Tape.

These non-insulated ring terminals are made of electrolytic copper for high conductivity. They can be installed with crimping tools having a single indent or double indent (recommended for solid wire). Serrated barrel increases grip on wire. Wire range identification is stamped on the tongue of each terminal.

Stock Thickness:

G & H = .05

J & K = .06

L & M = .07

Most standard bulk catalog numbers can be put on Mylar Tape for reel fed applications (i.e. 12050 tool and application dies).

Please put the suffix M for Mylar Tape RA2573M. (Bulk number 1000 and 500 packages.)

*Fork terminals allow easy installation because screw needs only to be loosened. Suffix **S** indicates a flanged-tongue fork with turned up tips for extra holding protection.*

Stock thickness same as ring terminal of same size.

[†] Turned-up toes

Most standard bulk catalog numbers can be put on Mylar Tape for reel fed applications (i.e. 12050 tool and application dies).

Please put the suffix M for Mylar Tape RA2573M. (Bulk number 1000 and 500 packages.)

Fork terminals allow easy installation since the mounting screw does not have to be completely removed. Catalog numbers with the suffix X indicate an expanded insulation support. This means a wider wire entry to accommodate heavy wall insulation.

Stock thickness same as ring terminal of same size.

Most standard bulk catalog numbers can be put on Mylar Tape for reel fed applications (i.e. 12050 tool and application dies).

Please put the suffix M for Mylar Tape RA2573M. (Bulk number 1000 and 500 packages.)

Non-Insulated Fork

These non-insulated fork terminals are made of electrolytic copper for high conductivity. They can be installed with crimping tools having a single indent or double indent (recommended for solid wire). Serrated barrel increase grip on wire. Wire range identification is stamped on the tongue of each terminal.

Catalog numbers with the suffix S indicate a flanged-tongue fork with turned-up tips for extra holding protection in the event the mounting screw loosens.

Stock thickness same as ring terminal of same

size.

U.L. Listed E9809

U.S. Pat. 3,590,387

Installing tools: WT110M, WT111M, WT112M, WT2000, ERG-2002, WT1300, WT3155A (B&C)

Most standard bulk catalog numbers can be put on Mylar Tape for reel fed applications (i.e. 12050 tool and application dies).

Please put the suffix M for Mylar Tape RA2573M. (Bulk number 1000 and 500 packages.)

Heat Shrinkable

These ring terminals, butt splices and disconnects are self-insulated with heat shrinkable nylon and internally coated sealant. Upon

completed installation, a fully sealed connection is achieved to protect the joint against the degrading effects of galvanic action, corrosion, and environmen-

**Heat Shrinkable-Ring Terminals—Expanded Insulation Support**

| Cat. No. | Pkg. Qty. | Wire Range | Max. Ins. | Bolt Hole | Wt./Lbs. Per 1000 |
