## General Description

FSA4157 and FSA4157A are high performance Single Pole／Double Throw（SPDT）analog switches．Both devices feature ultra low $\mathrm{R}_{\mathrm{ON}}$ of $1.15 \Omega$ maximum at 4.5 V $\mathrm{V}_{\mathrm{CC}}$ and will operate over the wide $\mathrm{V}_{\mathrm{CC}}$ range of 1.65 V to 5.5 V for FSA4157，and 2.7 V to 5.5 V for FSA4157A．The device is fabricated with sub－micron CMOS technology to achieve fast switching speeds and is designed for break－before－make operation．The select input is TTL level compatible．

The FSA4157A features very low quiescent current even when the control voltage is lower than the $\mathrm{V}_{\mathrm{CC}}$ supply． This feature services the mobile handset applications very well allowing for the direct interface with baseband processor general purpose I／Os．

## Technology Description

The Fairchild Switch family derives from and embodies Fairchild＇s proven switch technology used for several years in its 74LVXL384（FST3384）bus switch product．

## Notes:

4. Measured by the voltage drop between $A$ and $B$ pins at the indicated current through the switch. On Resistance is determined by the lower of the voltage on the two (A or B Ports).
5. $\Delta \mathrm{R}_{\mathrm{ON}}=\mathrm{R}_{\mathrm{ON} \text { max }}-\mathrm{R}_{\mathrm{ON} \text { min }}$ measured at identical $\mathrm{V}_{\mathrm{CC}}$, temperature and voltage.
6. Flatness is defined as the difference between the maximum and minimum value of On Resistance over the specified range of conditions.
