

### Features

- Precision reference voltage
  - AP431:  $2.495V \pm 1\%$
  - AP431A:  $2.495V \pm 0.5\%$
- Sink current capability: 200mA
- Minimum cathode current for regulation:  $300\mu A$
- Equivalent full-range temp coefficient:  $30 \text{ ppm}/^{\circ}\text{C}$
- Fast turn-on response
- Low dynamic output impedance:  $0.2\Omega$
- Programmable output voltage to 36V
- Low output noise
- Lead Free packages: SOT25, SC59, SC59R, SOT89-3L and TO92-3L
- SOT23, SOT23R, SOT25, SC59, SC59R, SOP-8L, SOT89-3L, TO92-3L: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/ RoHS Compliant (Note 1)

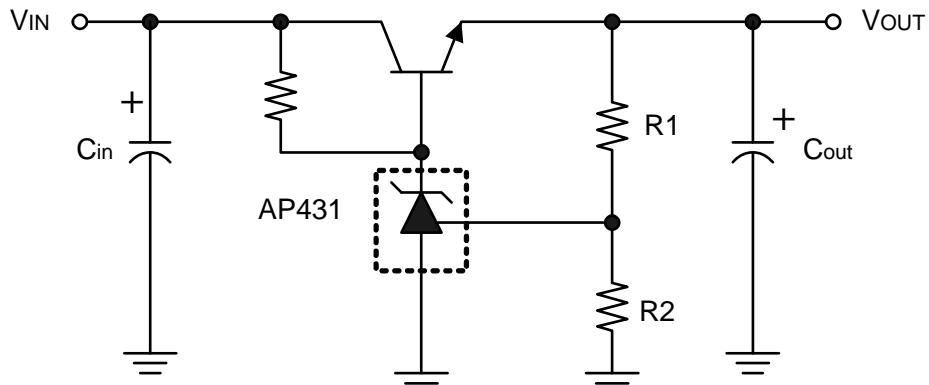

### Description

The AP431 and AP431A are 3-terminal adjustable precision shunt regulators with guaranteed temperature stability over the applicable extended commercial temperature range. The output voltage may be set at any level greater than  $2.495V$  ( $V_{REF}$ ) up to 36V merely by selecting two external resistors that act as a voltage divider network. These devices have a typical output impedance of  $0.2\Omega$ . Active output circuitry provides very sharp turn-on characteristics, making these devices excellent improved replacements for Zener diodes in many applications.

The precise (+/-) 1% Reference voltage tolerance of the AP431/AP431A make it possible in many applications to avoid the use of a variable resistor, consequently saving cost and eliminating drift and reliability problems associated with it.

Notes: 4. Deviation of reference input voltage,  $V_{\text{DEV}}$ , is defined as the maximum variation of the reference over the full temperature range.

The average temperature coefficient of the reference input voltage  $\alpha V_{\text{REF}}$  is defined as:

$$|\alpha V_{\text{REF}}| = \frac{\left(\frac{V_{\text{DEV}}}{V_{\text{REF}}(25^\circ\text{C})}\right) \cdot 10^6}{T_2 - T_1} \quad (\text{ppm}/^\circ\text{C})$$

Where:

$T_2 - T_1$  = full temperature change.

$\alpha V_{\text{REF}}$  can be positive or negative depending on whether the slope is positive or negative.

Notes: 5. The dynamic output impedance,  $R_z$ , is defined as:

$$|Z_{\text{KA}}| = \frac{\Delta V_{\text{KA}}}{\Delta I_{\text{KA}}}$$

When the device is programmed with two external resistors  $R_1$  and  $R_2$  (see Figure 2.), the dynamic output impedance of the overall circuit, is defined as:

$$|Z_{\text{KA}}| = \frac{\Delta V}{\Delta i} \approx |Z_{\text{KA}}| \left(1 + \frac{R_1}{R_2}\right)$$

+ The areas under the curves represent conditions that may cause the device to oscillate. For curves B, C, and D, R2 and V+ were adjusted to establish the initial  $V_{KA}$  and  $I_{KA}$  conditions with  $C_L=0$ .  $V_{BATT}$  and  $C_L$  were then adjusted to determine the ranges of stability.

**LIFE SUPPORT**

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
