- 1) Epoxy at terminals exceeds max. 0.9 mm over coverage.
- 2) Permanent acceptable deformation 0.25 mm respectively 0.5 mm temporarily.

Maximum permissible thermal load of the terminals during the resistance welding process depends on leadframe design.

Coil Data	
Available for nominal voltages	12 V
Nominal power consumption of the unsuppressed coil at nominal voltage	1.5 W
Test voltage winding/contact	500 VAC _{rms}
Ambient temperature range	–40 to +125°C
Operate time at nominal voltage	< 20 ms
Release time at nominal voltage ¹⁾	< 10 ms

1) For unsuppressed relay coil.

Note:
A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.
