\* Lit    \* Blinking    ☆ Blinking slowly

\* Set the reset inputs ① to ③ and stop inputs ① to ④ to 20 ms or higher.

\* When shorting a signal, please set the inter-terminal resistance to 1 kΩ or less, and the inter-terminal residual voltage to 2 V or less.

When releasing, please set the inter-terminal resistance to 100 kΩ or greater.

## PRECAUTIONS IN USING THE QM4H

1. Avoid locations subject to flammable or corrosive gases, excessive dust, oil, vibrations, or excessive shocks.

2. Since the main-unit is made of polycarbonate resin, avoid contact with or use in environments containing methyl alcohol, benzene, thinners, and other organic solvents; and ammonia, caustic sodas, and other alkaline substances.

3. Power supply superimposed surge protector

Although a surge protector will withstand standard-waveform voltage with the values in the next table, anything above this will destroy the internal circuit. You

should therefore use a surge absorber.

12 to 48 V AC/DC	100 to 240 V AC/DC
1,000 V	6,000 V

• Surge waveform  
 $[\pm(1.2 \times 50) \mu\text{s uni-polar full wave voltage}]$

4. In order to maintain the characteristics, do not remove the timer case.

5. When installing the panel, use the supplied AQM4812 main-unit mounting frame. Note that the AT8-DA4 is also available for sale separately.

6. If you change the operating voltage, be sure not to allow leak current into the timer.

7. Avoid leaving the unit powered continuously. Leaving the unit powered up with output set to ON continuously for a long period of time (about 1 month or more) will wear out the electronic components. If you will be keeping it powered continuously, combine with a relay to create the circuit shown below:
