## FEATURES

## －Compact flat body saves space

With a small footprint of $10.6 \mathrm{~mm}(\mathrm{~L}) \times$ $7.2 \mathrm{~mm}(\mathrm{~W}) .417$ inch $(\mathrm{L}) \times .283$ inch（W） for space savings，it also has a very short height of 5.2 mm .205 inch ．（Standard PC board type．）
－Outstanding surge resistance． Surge withstand between open contacts： $1,500 \mathrm{~V} 10 \times 160 \mu \mathrm{~s}$（FCC part 68） Surge withstand between contacts and coil： $2,500 \vee 2 \times 10 \mu \mathrm{~s}$（Telcordia）
－The use of twin crossbar contacts ensures high contact reliability． AgPd contact is used because of its good sulfide resistance．Adopting low－gas molding material．Coil assembly molding technology which avoids generating volatile gas from coil．

## －Increased packaging density

Due to highly efficient magnetic circuit design，leakage flux is reduced and changes in electrical characteristics from components being mounted close－ together are minimized．This all means a packaging density higher than ever before．
－Nominal operating power： 140 mW
－Outstanding vibration and shock resistance．
Functional shock resistance：
$750 \mathrm{~m} / \mathrm{s}^{2}\{75 \mathrm{G}\}$
Destructive shock resistance：
$1,000 \mathrm{~m} / \mathrm{s}^{2}$ \｛100G\}
Functional vibration resistance：
10 to 55 Hz （at double amplitude of 3.3 mm .130 inch）
Destructive vibration resistance：
10 to 55 Hz （at double amplitude of 5 mm .197 inch）

## Characteristics

Initial insulation resistance＊1 Min．1，000M及（at 500V DC）

## Notes：

米1 This value can change due to the switching frequency，environmental conditions， and desired reliability level，therefore it is recommended to check this with the actual load．
＊2 The upper limit for the ambient temperature is the maximum temperature that can satisfy the coil temperature rise．Under the packing condition，allowable temperature range is from -40 to $+70^{\circ} \mathrm{C}-40^{\circ}$ to $+158^{\circ} \mathrm{F}$ ．

## TYPICAL APPLICATIONS

## 2. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.
Chucking pressure in the direction A : $9.8 \mathrm{~N}\{1 \mathrm{kgf}\}$ or less Chucking pressure in the direction B : $9.8 \mathrm{~N}\{1 \mathrm{kgf}\}$ or less Chucking pressure in the direction C : $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less

Please chuck the Tسlla portion.
Avoid chucking the center of the relay. In addition, excessive chucking pressure to the pinpoint of the relay should be also avoided.
