Cable Bundle Organizing Tool

The PANDUIT cable bundle organizing tool efficiently arranges up to 24 data cables to optimize bundle size and improve installed appearance. The organized cables can then be easily secured using PANDUIT® Tak-Ty® Hook & Loop Cable Ties. Two insert sizes accommodate a wide range of cable diameters for greater installation flexibility. The tool's ergonomic, compact design is comfortable for installers to handle and also works well in tight spaces. This user-friendly tool reduces cable installation time up to 50%.

*Order number required in multiples of Standard Package Quantity.
**When using the CBOT24K on 10 Gigabit cables, it is recommended that PANDUIT 10Gig” Category 6A cables be used for optimum performance of installed cable. See www.panduit.com for cable details.

Installation Instructions

The steps below outline how easy it is to use the PANDUIT cable bundle organizing tool starting from the middle of the bundle outwards, using two tools. For starting at the end of the bundle, follow the same steps using only one tool. (Use above table to select appropriate insert based on cable diameter/type.)

Step 1
Use the unique pocket and boss features to align two same color inserts. Hold both together.

Step 2
Insert cables, one at a time, into the pre-formed slots of both inserts until all cables are installed.

Step 3
Pull the two inserts apart.

Step 4
Place the jacket cover around each insert and secure with the attached hook and loop fastener.

Step 5
Guide the tool along the bundle length to organize the cables, stopping at desired intervals to apply PANDUIT® Tak-Ty® Hook & Loop Cable Ties.

Step 6
When completed, slide tool off of cable bundle. The PANDUIT cable bundle organizing tool reduces installation time up to 50% and delivers a professional, organized installation.
