

GLM 250 VF

The New Bosch outdoor laser rangefinder GLM250 VF Professional laser from Bosch is ideal for both indoor and outdoor measurements thanks to the new integrated viewfinder (VF). The Bosch GLM 250VF or GLM250 is rugged enough for outdoor use and has many easy to use measurement functions.

- Bosch GLM 250 measurement range from 0.05M to a massive 250 metres with a typical accuracy of plus or minus one millimeter (1mm)
- Bosch GLM 250 functions include area, volume measurement and simple Pythagoras height calculation plus seven other time saving laser measurement functions
- The GLM 250 has an Intuitive user interface, with a large illuminated four-line display for easy of use.
- The Bosch GLM 250 VF includes:
 - FREE Bosch Case
 - FREE AAA Batteries
 - FREE next day delivery
 - FREE Telephone support from Bosch Specialist
 - Clear Bosch instruction manual

Product Description

The new Bosch laser rangefinder GLM 250 VF Professional opens up a new dimension in measurement. Bosch is well known for leading edge technology and this shows in the Bosch GLM250 that can measure distances from 0.05 to 250 metres with a typical accuracy of one millimeter.

The Bosch GLM 250 VF is designed for external use. The VF stands for the new Bosch View Finder that enables the user to measure even in bright sunlight. Many of the measurement and calculation functions can be set easily at the push of a button. This makes the GLM 250 Professional ideal for all measurement tasks indoors and outdoors

Apart from the usual area and volume calculation as well as simple Pythagoras for indirect height measurement, the GLM 250 Professional provides seven other measurement functions: Combined Pythagoras for partial height measurement, double Pythagoras for convenient tripod measurements and height calculations at inaccessible

positions, trapezoid function for measuring roof inclinations, timer function for precise measuring with tripod or from difficult measuring points, as well as a surveying function to mark recurring distances. The Minimum-Maximum function can be used in combination with all other measurements.

For reliable work on the construction site, the Bosch GLM 250 laser rangefinder and its battery compartment are protected against dust and splashes according to IP 54. Rubberized edged and corners make it rugged, reliably protecting the device if it is dropped.
