## 22.5mm DIN rail mounting Electronic Timers

- $\mathrm{AC} / \mathrm{DC}$ coil operation
- Multi-time range
- Multi-function, On-delay, Off-delay and Star/Delta versions
- Voltage range selectable
- Marking plate cover

## Options and ordering codes

Multi-voltage I/P 24VAC/DC and 100230VAC selectable on unit. Except EA+RA models

110VAC + 24VAC/DC
EA + RA models only

230VAC + 24VAC/DC
EA + RA models only

## A On Delay

On application of supply voltage the time period starts to run. On completion of time the relay energises. Power off reset.

## Off delay

Supply to the unit must be continuous. On closure of the control contact (S) the relay energises immediately. On re-opening of $S$ the time period starts to run and $(\mathrm{R})$ de-energises If the control contact ( S ) is reclosed before "the actual time period is completed, this period will be deleted" and a new one starts on reopening of (S).

C Single shot leading edge pulse started
Supply to the unit must be continuous. On closure of the control contct (S) the relay energises immediately and the time starts to run. On completion of the time the relay will de-energise. Activation of ( S ) during the time out period has no effect.

## D Single shot trailing edge

Supply to the unit must be continuous. The first closure of (S) has no effect. On opening of ( S ) the time period starts to run and (R) energises immediately. On completion of time the relay de-energises. Activation of the control contact (S) during the time out period has no effect.

## E On delay with control contact

Supply to the unit must be continuous. On closure of (S) the time period starts to run. On completion of time the relay energises and stays energised as long as (S) is closed. Opening the control contact before the time out is complete will reset the time period.

F Single shot leading edge
On application of supply voltage the time starts and (R)energises immediately. Following time out the relay will de-energise. For a new start of function the supply voltage must be interrupted.

G Flasher pause first
On application of supply voltage the time period starts to "run. The relay switches on and off for the periods, beginning" with a pause. The time period for pause and pulse is equal.

H Pulse detection
On application of supply voltage the relay energises. The first pulse of (S) starts the time period. Receiving pulses during the time period extends it and $(R)$ stays energised. Receiving no pulses during the time period completes it and (R) deenergises. (R) stays latched until supply voltage has been interrupted.

## Ri Cyclic timer pulse started

On application of supply voltage the time period starts to run. "The relay switches on and off for the periods, beginning with a" pulse. The time period for t 1 and t 2 can be different. The function continues as long as voltage is applied.

Cyclic timer pause started
On application of supply voltage the time period starts to run. "The relay switches on and off for the periods, beginning with a" pause. The time period for t 1 and t 2 can be different. The function continues as long as voltage is applied.

## Star Delta

On application of supply voltage the contact 17-18 of the star relay is closed and the star time $t 1$ begins to run. On completion of the $t 1$ the star relay deenergises and the dwell time t2 starts. On completion of t2 the contact 17-28 of the delta relay is closed and remains in operation as long as the supply voltage is applied.

## T True Off Delay

When supply voltage $U$ is engaged the relay energises (contacts $15-18$ ). When the supply voltage is removed the set time $t$ begins to run. On completion of time $t$ the output falls back to the off position (contacts 15-16). If the supply voltage $U$ is reengaged to "the unit before $t$ has elapsed, the time already elapsed is canceled" and starts again next time the supply voltage is interrupted.

## Function switches

## For IMO type TDMB

Positions of function switch with one contact as
instaneous c.t.

Both contacts delayed

Start function B, C, D, E and H by control contract A1-B1

## For IMO type TDMA

Start function B, C, D, E and H by control contract A1-B1
