

High resolution video cable

The 2060V is a true 75 ohm high resolution video cable. Its superb quality ensures excellent signal transfer without image ghosting or the addition of any "noise", as well as preserving edge detail and accuracy. In addition to a precise impedance matching design and 24K gold plated connectors, the double-shielding, high quality insulation and pure oxygen free copper work together to produce the perfect video cable. This cable plays an important role in obtaining lifelike video reproduction.

- Pure OFHC cable
- PEF insulation and double shielded cable
- Teflon insulated RCA connectors
- 24K gold plated contacts
