

Torque Limiting Screwdrivers

- Range of 'production' screwdrivers- ideal in an environment where the same torque value must be reliably and accurately repeated. They must be set using a calibration analyser.
- Smooth, bi-directional 'slipping' mechanism completely eliminates the possibility of over tightening.
- TLS models available with 1/4" female hex for use with screwdrivers blades and accessories. Minor, Standard and TLS 1360 models available with both 1/4" female hex and 1/4" square drive for use with nut sockets.
- Tamper proof adjustment eliminates reliance on Operator skill and gives control to the Quality Department.
