DESCRIPTION

The LD1117A is a LOW DROP Voltage Regulator able to provide up to 1A of Output Current, available even in adjustable version ($V_{ref}=1.25V$). Concerning fixed versions, are offered the following Output Voltages: 1.2V, 1.8V, 2.5V, 2.85V, 3.3V and 5.0V. The 2.85V type is ideal for SCSI-2 lines active termination. The device is

supplied in: SOT-223, DPAK, D²PAK/A and TO-220. Surface mount packages optimize the thermal characteristics even offering a relevant space saving effect. High efficiency is assured by NPN pass transistor. Only a very common 10 μF minimum capacitor is needed for stability. Only chip trimming allows the regulator to reach a very tight output voltage tolerance, within $\pm 2\%$ at $25^{\circ}C$.

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied. Over the above suggested Max Power Dissipation a Short Circuit could definitively damage the device.

**LD1117A ADJUSTABLE: APPLICATION NOTE**

The LD1117A ADJUSTABLE has a thermal stabilized $1.25 \pm 0.012\text{V}$ reference voltage between the OUT and ADJ pins. I_{ADJ} is $60\mu\text{A}$ typ. ($120\mu\text{A}$ max.) and ΔI_{ADJ} is $1\mu\text{A}$ typ. ($5\mu\text{A}$ max.).

R_1 is normally fixed to 120Ω . From figure 7 we obtain:

$$V_{OUT} = V_{REF} + R_2 (I_{ADJ} + I_{R1}) = V_{REF} + R_2 (I_{ADJ} + V_{REF}/R_1) = V_{REF} (1 + R_2/R_1) + R_2 \times I_{ADJ}$$

In normal application R_2 value is in the range of few Kohm, so the $R_2 \times I_{DJ}$ product could not be

considered in the V_{OUT} calculation; then the above expression becomes:

$$V_{OUT} = V_{REF} (1 + R_2/R_1)$$

In order to have the better load regulation it is important to realize a good Kelvin connection of R_1 and R_2 resistors. In particular R_1 connection must be realized very close to OUT and ADJ pin, while R_2 ground connection must be placed as near as possible to the negative Load pin. Ripple rejection can be improved by introducing a $10\mu\text{F}$ electrolytic capacitor placed in parallel to the R_2 resistor (see Fig. 10).
