Luxeon™ V Portable

Technical Data DS40

Luxeon™ is a revolutionary, energy efficient and ultra compact new light source, combining the lifetime and reliability advantages of Light Emitting Diodes with the brightness of conventional lighting.

The Luxeon V Portable, part of the Luxeon V family, delivers white luminous output 100 times brighter than standard small signal LEDs and 4X that of a standard Luxeon.

Luxeon V Portable is designed for portable lighting products such as flashlights, “miner” head-mounted lights, emergency-egress lighting, and other battery-operated applications. This device offers ruggedness, low power consumptions, and lifetimes greater than 50X conventional flashlight sources- over 500 hours compared to the typical 20-hour life for an incandescent bulb.

Features

• Highest Flux LED in the world – 50X traditional “5mm” LEDs, and 4X a standard Luxeon.
• 500+ hours operation compared to just 20 hours for typical incandescent flashlight bulbs.
• Extreme Luminous Density – 20X the lm/mm² of a standard through hole LED
• More Energy Efficient than Incandescent and most Halogen lamps
• Low voltage DC operated
• Cool beam, safe to the touch
• Instant light (less than 100 ns)
• Fully dimmable
• No UV
• Superior ESD protection
• Uniform angular color uniformity superior to other solid state sources, eliminating color halos within the light beam

Benefits

• Compact low voltage light source for portable lighting applications
• Highly efficient source results in longer battery life
• Solid state technology eliminates fragile filament resulting in extremely rugged designs
• Much longer life than conventional light bulbs enables sealed for life designs

Luxeon V Portable is available in white.
Mechanical Dimensions - Emitter

Lambertian – LXHL-PW03

Notes:
1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required – slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.

Side Emitting – LXHL-DW03

Notes:
1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required – slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.
Mechanical Dimensions - Star

Lambertian – LXHL-LW6C
Side Emitting – LXHL-FW6C

Notes:
1. Slots in aluminum-core PCB for M3 or #4 mounting screw.
2. Electrical interconnection pads labeled on the aluminum-core PCB with "+" and "-" to denote positive and negative, respectively. All positive pads are interconnected, as are all negative pads, allowing for flexibility in array interconnection.
3. Electrical insulation between neighboring Stars is required – aluminum board is not electrically neutral.
4. Drawings not to scale.
5. All dimensions are in millimeters.

</tbody>
</table>

Notes:
1. Minimum luminous flux performance guaranteed within published operating conditions. Lumileds maintains a tolerance of ±10% on flux measurements.
2. Luxeon types with even higher luminous flux levels will become available in the future. Please consult your Lumileds Authorized Distributor or Lumileds sales representative for more information.

</tbody>
</table>

#### Notes:
1. Lumileds maintains a tolerance of $\pm 0.06$V on forward voltage measurements.
2. Dynamic resistance is the inverse of the slope in linear forward voltage model for LEDs. See Figure 3.
3. Measured between $25^\circ$C $\leq T_J \leq 110^\circ$C at $I_F = 700$mA.

### Optical Characteristics at 700mA, Junction Temperature, $T_J = 25^\circ$C

<table>
<thead>
<tr>

</tbody>
</table>

### Notes:
1. Proper current derating must be observed to maintain junction temperature below the maximum. For more information, consult the Luxeon Design Guide, available upon request.
2. LEDs are not designed to be driven in reverse bias. Please consult Lumileds’ application brief AB11 for further information.
3. Allowable maximum board temperature to avoid exceeding maximum junction temperature at maximum Vf limit at 700 mA based on thermal resistance of Star assembly.
4. Measured at leads, during lead soldering and slug attach, body temperature must not exceed 120°C. Luxeon emitters cannot be soldered by general IR or Vapor-phase reflow, nor by wave soldering. Lead soldering is limited to selective heating of the leads, such as by hot-bar reflow, fiber focussed IR, or hand soldering. The package back plane (slug) may not be attached by soldering, but rather with a thermally conductive adhesive. Electrical insulation between the slug and the board is required. Please consult Lumileds’ Application Brief AB10 on Luxeon Emitter Assembly Information for further details on assembly methods.

Note:
For more detailed technical information regarding Luxeon radiation patterns, please consult your Lumileds Authorized Distributor or Lumileds sales representative.

Figure 6. Representative Typical Spatial Radiation Pattern for LXHL-PW03 and LXHL-LW6C.

Figure 7. Representative Typical Spatial Radiation Pattern for LXHL-DW03 and LXHL-FW6C.

Note:
For additional information please consult your Lumileds Authorized Distributor or Lumileds sales representative.
Emitter Reel Packaging

Figure 8. Reel dimensions and orientation.

Figure 9. Tape dimensions.

Notes:
1. Luxeon V emitters should be picked up by the body (not the lens) during placement. The inner diameter of the pick-up collet should be greater than or equal to 6.5 mm. Please consult Lumileds' Application Brief AB10 on Luxeon Emitter assembly information for further details on assembly methods.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.
About Luxeon

Luxeon is the new world of solid state lighting (LED) technology. Luxeon Power Light Source Solutions offer huge advantages over conventional lighting and huge advantages over other LED solutions. Luxeon enables partners to create and market products that, until now, were impossible to create. This means the opportunity to create products with a clear competitive advantage in the market. Products that are smaller, lighter, sleeker, cooler, and brighter. Products that are more fun to use, more efficient, and more environmentally conscious than ever before possible!

Company Information

Luxeon is developed, manufactured and marketed by Lumileds Lighting, LLC. Lumileds is a world-class supplier of Light Emitting Diodes (LEDs) producing billions of LEDs annually. Lumileds is a fully integrated supplier, producing core LED material in all three base colors (Red, Green, Blue) and White. Lumileds has R&D development centers in San Jose, California and Best, The Netherlands. Production capabilities in San Jose, California and Malaysia.

Lumileds is pioneering the high-flux LED technology and bridging the gap between solid state LED technology and the lighting world. Lumileds is absolutely dedicated to bringing the best and brightest LED technology to enable new applications and markets in the Lighting world.
