

NATL SEMICOND (LINEAR)

T-79-31

LM110/LM210/LM310

2

LM110/LM210/LM310 Voltage Follower

General Description

The LM110 series are monolithic operational amplifiers internally connected as unity-gain non-inverting amplifiers. They use super-gain transistors in the input stage to get low bias current without sacrificing speed. Directly interchangeable with 101, 741 and 709 in voltage follower applications, these devices have internal frequency compensation and provision for offset balancing.

The LM110 series are useful in fast sample and hold circuits, active filters, or as general-purpose buffers. Further, the frequency response is sufficiently better than standard IC amplifiers that the followers can be included in the feedback loop without introducing instability. They are plug-in replacements for the LM102 series voltage followers, offer-

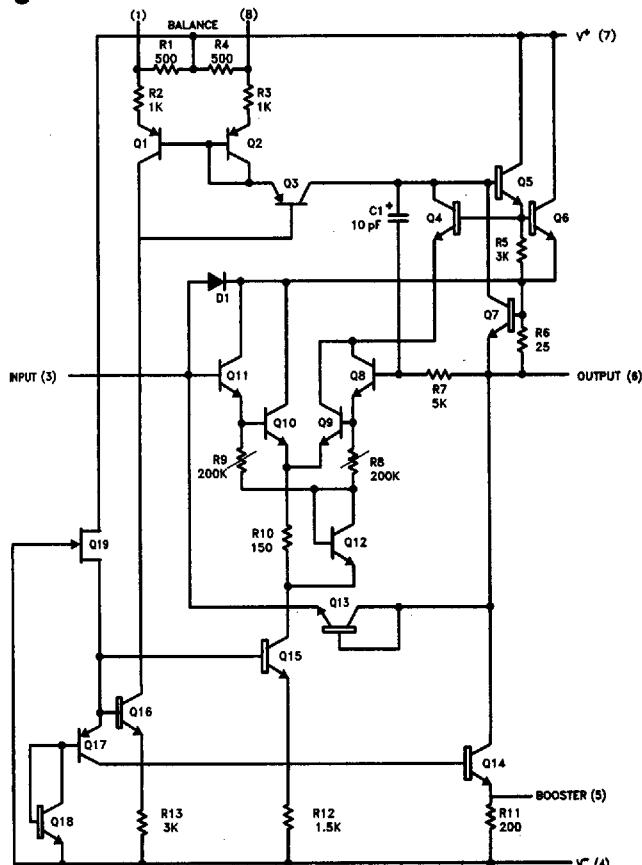

ing lower offset voltage, drift, bias current and noise in addition to higher speed and wider operating voltage range.

The LM110 is specified over a temperature range $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$, the LM210 from $-25^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$ and the LM310 from $0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$.

Features

- Input current 10 nA max over temperature
- Small signal bandwidth 20 MHz
- Slew rate 30 V/ μs
- Supply voltage range $\pm 5\text{V}$ to $\pm 18\text{V}$

Schematic Diagram

TL/H/7761-1

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

(Note 6)

Supply Voltage	$\pm 18V$
Power Dissipation (Note 1)	500 mW
Input Voltage (Note 2)	$\pm 15V$
Output Short Circuit Duration (Note 3)	Indefinite
Operating Temperature Range LM110	-55°C to +125°C
LM210	-25°C to +85°C
LM310	0°C to +70°C

NATL SEMICOND (LINEAR)

Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10 sec.)	260°C
Soldering Information	
Dual-In-Line Package	
Soldering (10 sec.)	260°C
Small Outline Package	
Vapor Phase (60 sec.)	215°C
Infrared (15 sec.)	220°C
See AN-450 "Surface Mounting Methods and Their Effect on Product Reliability" for other methods of soldering surface mount devices.	
ESD rating to be determined.	

Electrical Characteristics (Note 4)

Parameter	Conditions	LM110			LM210			LM310			Units
		Min	Typ	Max	Min	Typ	Max	Min	Typ	Max	
Input Offset Voltage	T _A = 25°C		1.5	4.0		1.5	4.0		2.5	7.5	mV
Input Bias Current	T _A = 25°C		1.0	3.0		1.0	3.0		2.0	7.0	nA
Input Resistance	T _A = 25°C	10 ¹⁰	10 ¹²		10 ¹⁰	10 ¹²		10 ¹⁰	10 ¹²		Ω
Input Capacitance			1.5			1.5			1.5		pF
Large Signal Voltage Gain	T _A = 25°C, V _S = ±15V V _{OUT} = ±10V, R _L = 8 kΩ	0.999	0.9999		0.999	0.9999		0.999	0.9999		V/V
Output Resistance	T _A = 25°C		0.75	2.5		0.75	2.5		0.75	2.5	Ω
Supply Current	T _A = 25°C		3.9	5.5		3.9	5.5		3.9	5.5	mA
Input Offset Voltage				6.0			6.0			10	mV
Offset Voltage Temperature Drift	-55°C ≤ T _A ≤ +85°C +85 ≤ T _A ≤ 125°C 0°C ≤ T _A ≤ +70°C		6 12			6				10	µV/°C µV/°C µV/°C

Large Signal Voltage Gain	V _S = ±15V, V _{OUT} = ±10V R _L = 10 kΩ	0.999			0.999			0.999			V/V
Output Voltage Swing (Note 5)	V _S = ±15V, R _L = 10 kΩ	±10			±10			±10			V
Supply Current	T _A = 125°C		2.0	4.0		2.0	4.0				mA
Supply Voltage Rejection Ratio	±5V ≤ V _S ≤ ±18V	70	80		70	80		70	80		dB

Note 1: The maximum junction temperature of the LM110 is 150°C, of the LM210 is 100°C, and of the LM310 is 85°C. For operating at elevated temperatures, devices in the HO8 package must be derated based on a thermal resistance of 165°C/W, junction to ambient, or 22°C/W, junction to case. The thermal resistance of the dual-in-line package is 100°C/W, junction to ambient.

Note 2: For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

Note 3: Continuous short circuit for the LM110 and LM210 is allowed for case temperatures to 125°C and ambient temperatures to 70°C, and for the LM310, 70°C case temperature or 55°C ambient temperature. It is necessary to insert a resistor greater than 2 kΩ in series with the input when the amplifier is driven from low impedance sources to prevent damage when the output is shorted. R_g = 5k min, 10k typical is recommended for dynamic stability in all applications.

Note 4: These specifications apply for ±5V ≤ V_S ≤ ±18V and -55°C ≤ T_A ≤ 125°C for the LM110, -25°C ≤ T_A ≤ 85°C for the LM210, and 0°C ≤ T_A ≤ 70°C for the LM310 unless otherwise specified.

Note 5: Increased output swing under load can be obtained by connecting an external resistor between the booster and V⁻ terminals. See curve.

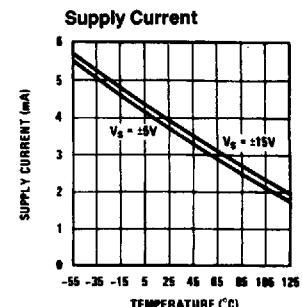

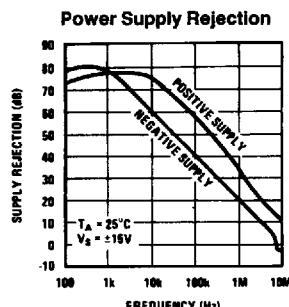

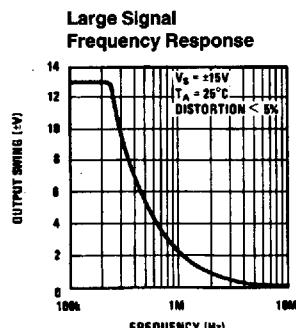

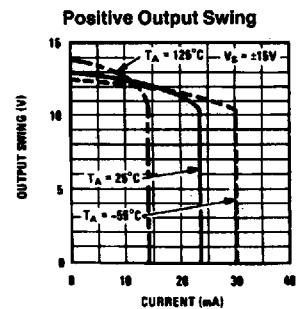

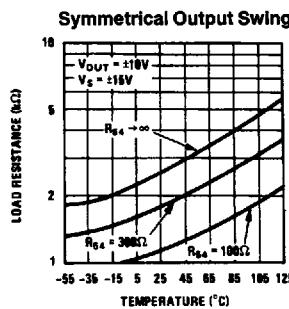

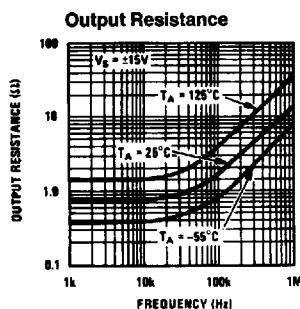

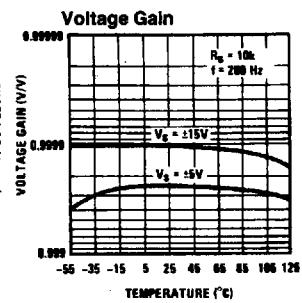

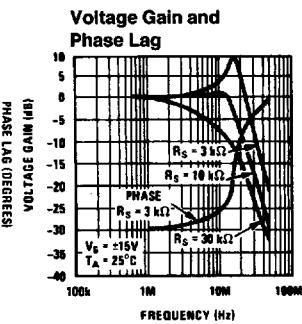

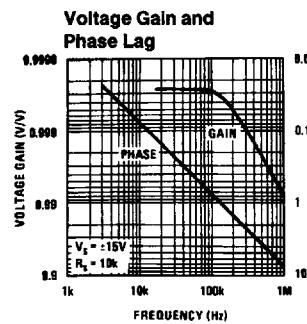

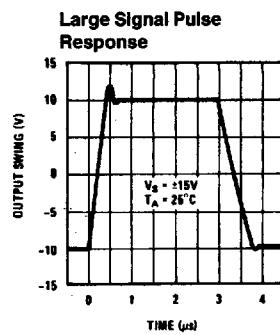

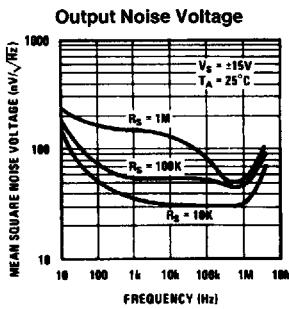

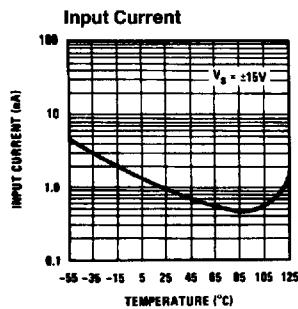

Note 6: Refer to RETS110X for LM110H, LM110J military specifications.

Application Hint

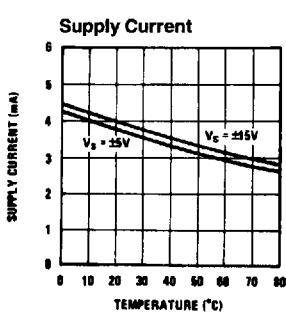

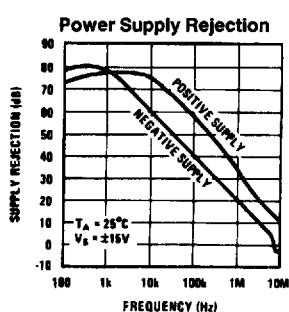

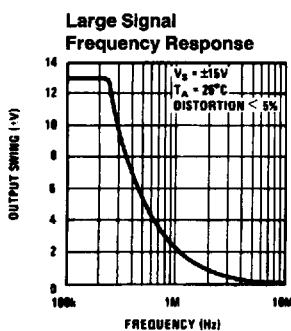

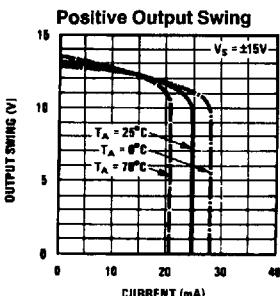

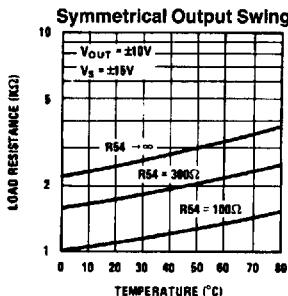

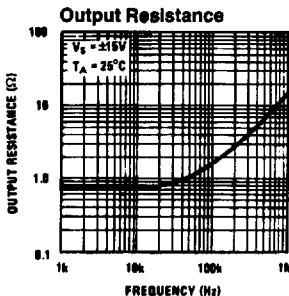

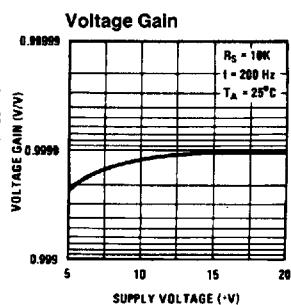

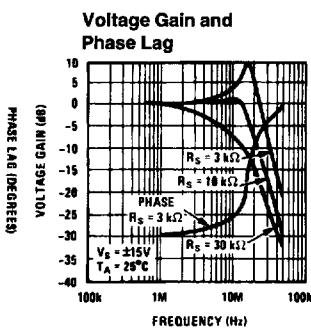

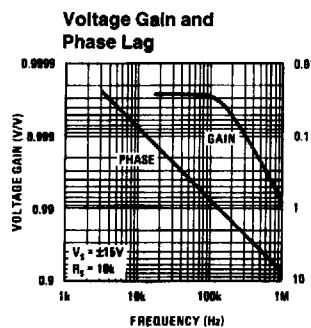

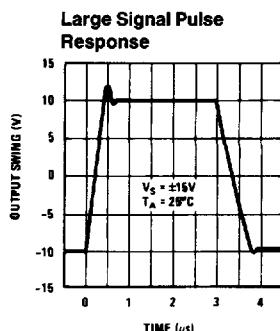

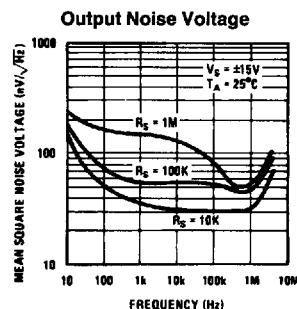

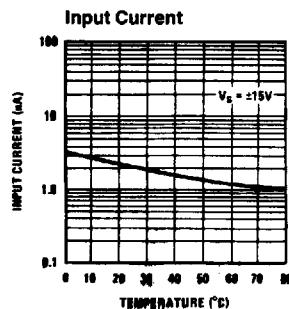

The input must be driven from a source impedance of typically 10 kΩ (5 kΩ min.) to maintain stability. The total source impedance will be reduced at high frequencies if there is stray capacitance at the input pin. In these cases, a 10 kΩ resistor should be inserted in series with the input, physically close to the input pin to minimize the stray capacitance and prevent oscillation.
