NCP3065D3SLDGEVB:SEPIC LED DRV 700MA

Evaluation Board Description

This circuit is intended for driving high power LEDs.It is designed for such wide input nominal 12 Vdc applications as automotive and low voltage lighting (12 Vdc/12 Vac). An optional dimming PWM input is included. The circuit is based on NCP3065 operation at 250 kHz in a non-isolated configuration. The primary advantages of this circuit are in the wide input voltage range, wide output voltage range, and in its high efficiency. A pulse feedback resistor (R8) is used to vary the slope of the oscillator ramp, achieving duty cycle control and steady switching frequency over a wide input voltage range.

Features and Applications

Features

- Buck-Boost operation
- Wide input and output operation voltage
- Regulated output current
- Dimming
- High frequency operation
- Minimal input and output current ripple
- Open LED protection
- Output short circuit protection

Evaluation Board Information

Evaluation Board	Status	Pb-free	Short Description	Parts Used	Action
NCP3065D3SLDGEVB	Active	Pb-fr	SEPIC LED DRV 700MA	NCV3065MNTXG	Contact Local Sales Office
