Product Data S	Sheet	
		Updated : February 2010 Supersedes :September 2008
Product Description	Scotch-Weld TL43 is a general purpose, medium-high strength, thixotropic anaerobic threadlocker. The product cures when confined in the absence of air on close-fitting metal surfaces.	
Key Features	Scotch-Weld TL43 is formulated to lock all metric and imperial nuts and bolts, preventing vibration loosening and leakage through the threads. TL43 is slightly oil tolerant, so it will bond some `as received` parts, but best results are obtained with clean substrates. The thixotropic nature of the product prevents run off, dripping and migration after assembly. TL43 is typically used on mounting bolts, housing screws, etc. Scotch-Weld TL43 prevents corrosion of assembled parts.

Additional Product Information	Anerobic adhesives only cure in the absence of air and with metal part activation. Adhesive outside the joint will remain uncured and may be wiped away with a cloth.	
	Scotch-Weld TL42 is suitable for most medium and coarse-threaded screws, nuts and bolts. Not recommended on certain plastics as stress cracking can sometimes result. Some anti-corrosion chemicals inhibit the cure system in this type of anaerobic. Trials are recommended to establish whether cleaning of the parts is necessary. Scotch-Weld AC64 Activator may be required on plated parts.	
Application Techniques	Ensure parts are clean, dry and free from oil and grease. Apply adhesive to all engaged threads. Assemble parts and allow to cure. Wipe excess adhesive from outside of joint. Heating the assembled parts accelerates the curing process. Scotch-Weld AC64 Activator may be used to accelerate cure and should be used if the application temperature is below 5°C. The use of an acclerator may reduce the final bond strength by up to 30%	
Storage Conditions	Keep the adhesive in a cool, dry place away from direct sunlight. Under such conditions shelf life at room temperature will be 12 months. Refrigeration to 5°C gives optimum storage stability.	
Shelf Life	12 months from date of despatch by 3M when stored in the original carton at $21^\circ$ C
